## Abstract

Target development laboratory at Inter-University Accelerator Centre (IUAC) is one of the main facilities for the fabrication of nuclear physics targets in India. Vacuum evaporation and rolling technique are mainly used for the target fabrication. Isotopic Targets of Gd, Pt,W,Mo,Ta,Ni, Ag and Sn have been recently developed in the form of self-supporting targets and with thin carbon backing. Recent target developments and recent upgradation of facilities in target development laboratory at IUAC will be discussed in the report.
