Determination of f_K/f_π from staggered $N_f=2+1+1$ ensembles

Wednesday, 15 July 2015 18:30 (2h 30m)

Preliminary results are presented from a new determination of f_K/f_π which is based on a series of staggered $N_f=2+1+1$ simulations in the vicinity of the physical point. Special emphasis is put on the interpolation to the physical point, the finite-volume corrections, the continuum extrapolation and the breaking of the isospin symmetry.
