## Anatomy of SU(3) flux tubes at finite temperature

*Friday, 17 July 2015 17:30 (20 minutes)*

An attempt to adapt the study of color flux tubes to the case of finite temperature has been made. The field is measured through a connected correlator of Wilson loop and plaquette in the spatial sub-lattice. Still the profile of the flux tube resembles the transverse field distribution around an isolated vortex in an ordinary superconductor. The temperature dependence of all the parameters characterizing the flux tube is investigated.
