Phase structure of $N_f=3$ QCD at finite temperature and density by Wilson-Clover fermions

Tuesday, 14 July 2015 15:20 (20 minutes)

We investigate the phase structure of finite temperature and density QCD with three-flavor by using Wilson-Clover fermions. We focus on locating the critical end point that characterizes the phase structure and extracting the curvature of critical line on the plane of quark chemical potential and pseudo-scalar meson mass.
