## Clover fermions in Numerical Stochastic Perturbation Theory

*Wednesday, 15 July 2015 17:50 (20 minutes)*

We present an implementation of clover fermions in Numerical Stochastic Perturbation Theory. Two loop computations are already possible, e.g. we already computed critical mass. We stress that any two loop computation only relies on the known value of  $c_{SW}$  to one loop.

A two loop determination of  $c_{SW}$  would be of great interest: we report on the status of our computation of the latter.
