

## Charm Physics at BESIII

*Friday, 29 July 2016 14:50 (30 minutes)*

The BESIII Experiment at the Beijing Electron Positron Collider (BEPCII) accumulated the world's largest  $e^+e^-$  collision samples at 3.773 and 4.009 GeV. In this talk, we will report the recent results on charm decays, including semi-leptonic decays, determination of CKM elements  $|V_{cs}(d)|$ , Dalitz plot decays of  $K_S\pi^+\pi^0, K_S K^+K^-$ .

**Presenter:** FANG, Yi (Institute of High Energy Physics)
