

Neutral pion form factor measurement by the NA62 experiment

Tuesday, 26 July 2016 14:50 (30 minutes)

The NA62 experiment at CERN collected a large sample of charged kaon decays with a highly efficient trigger for decays into electrons in 2007. The kaon beam represents a source of tagged neutral pion decays in vacuum. A measurement of the electromagnetic transition form factor slope of the neutral pion in the time-like region from ~1 million fully reconstructed π^0 Dalitz decay is presented.

Presenter: GAMBERINI, Enrico (University of Ferrara)

Session Classification: Baryons
