## Pc(4450) and triangle singularity

Wednesday, 27 July 2016 15:15 (30 minutes)

We want to discuss the Pc(4450) structure observed by the LHCb Collaboration in the J/psi proton final states. We want to point out that it is located exactly at the chi\_{c1}-proton threshold, and coincides with the leading Landau singularity of the triangle loop Lambda(1890)-chi\_{c1}-proton. We also discuss how to distinguish a genuine resonance from the kinematical singularity.
