

P_T Distribution From Monte Carlo Samples

Slide 1

Benard Mulilo
RIKEN Radiation Laboratory
Apr. 11, 2019 @ 9 pm JST

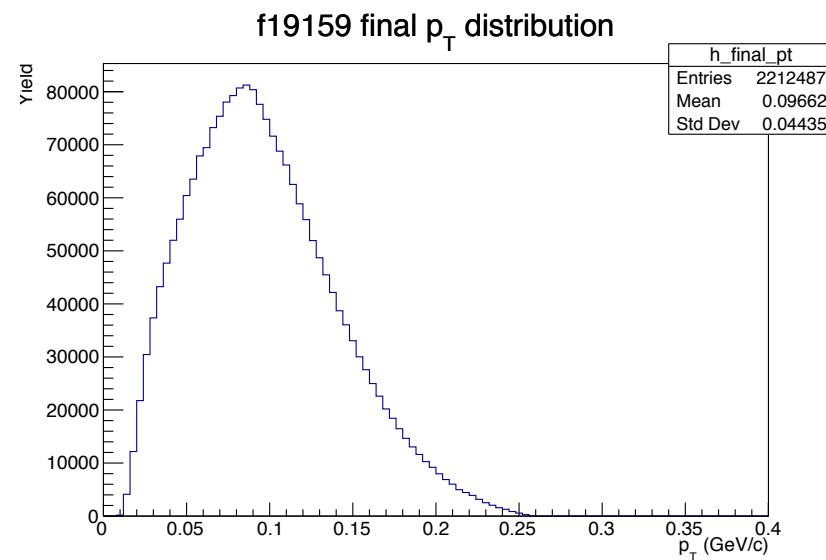

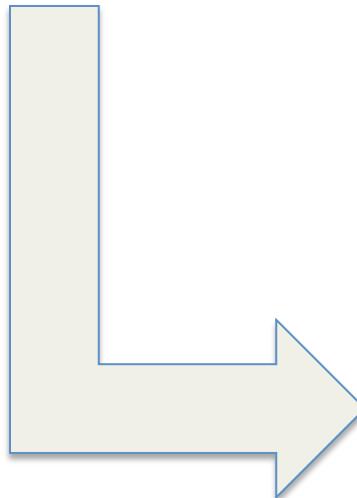

Monte Carlo Simulation Samples

Slide 2

- ① UPC samples (Electromagnetic)
- ② PYTHIA samples (Hadronic)
- ③ DPMJET samples (Hadronic)

Sample combinations to produce P_T data distribution:

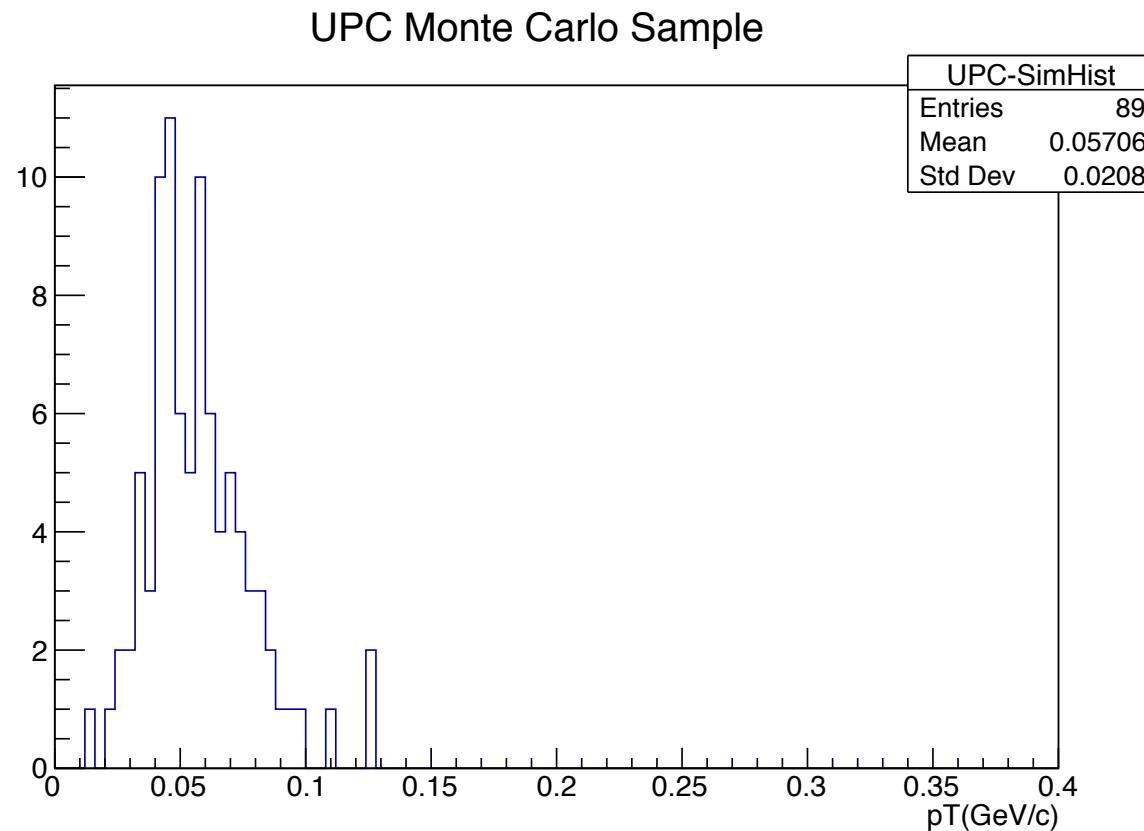

- UPC + PYTHIA (EM + Had)
- UPC + DPMJET (EM + Had)

P_T Distribution (UPC MC Samples)

Slide 3

P_T distribution from a single UPC sample:

P_T Distribution (UPC MC Samples)

Slide 4

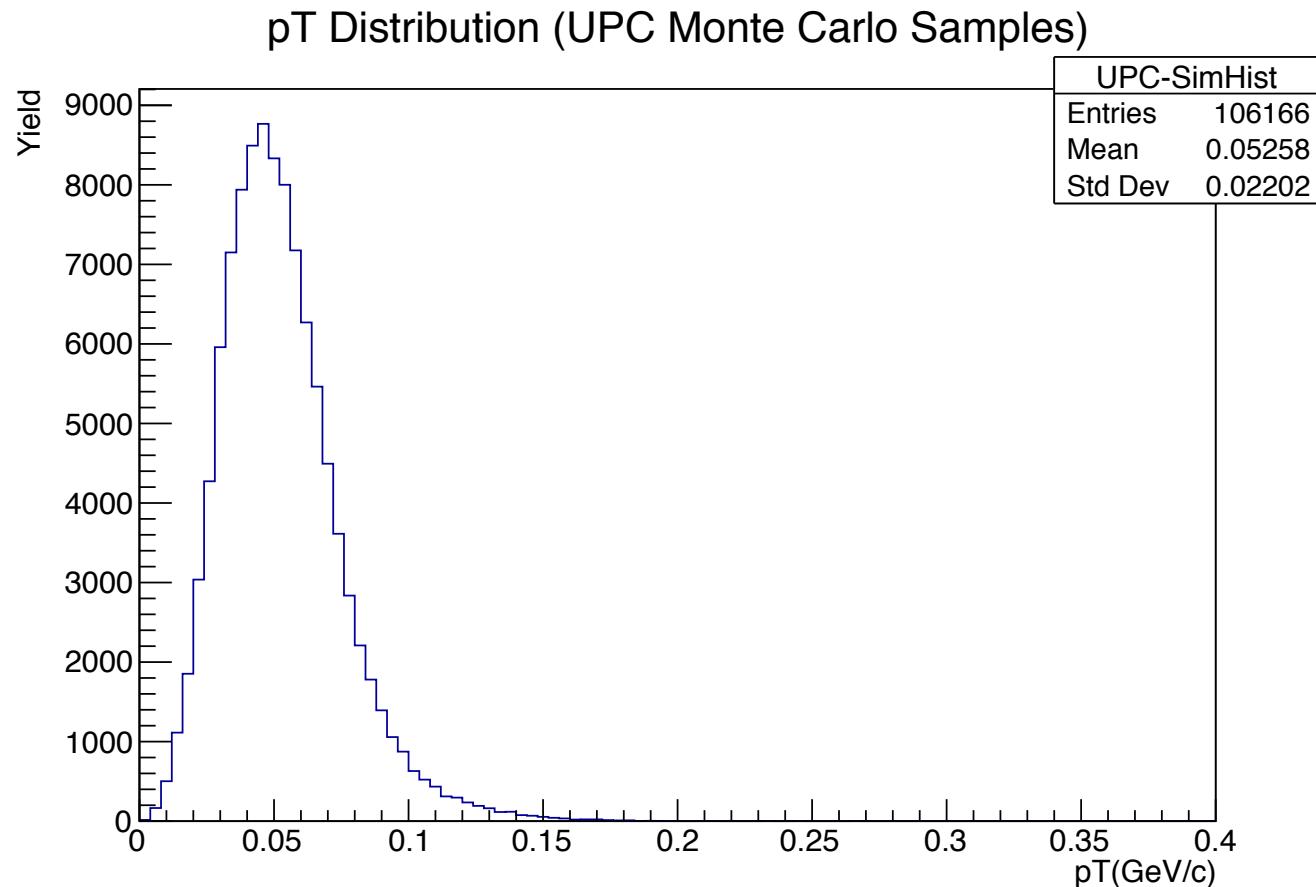

All available UPC samples (1212):

```
[benardmulilo [work] $ cd UPC
[benardmulilo [UPC] $ ls

```

P_T Distribution (UPC MC Samples)

Slide 5

Concatenated all available UPC samples (1212 root files) to produce total P_T distribution

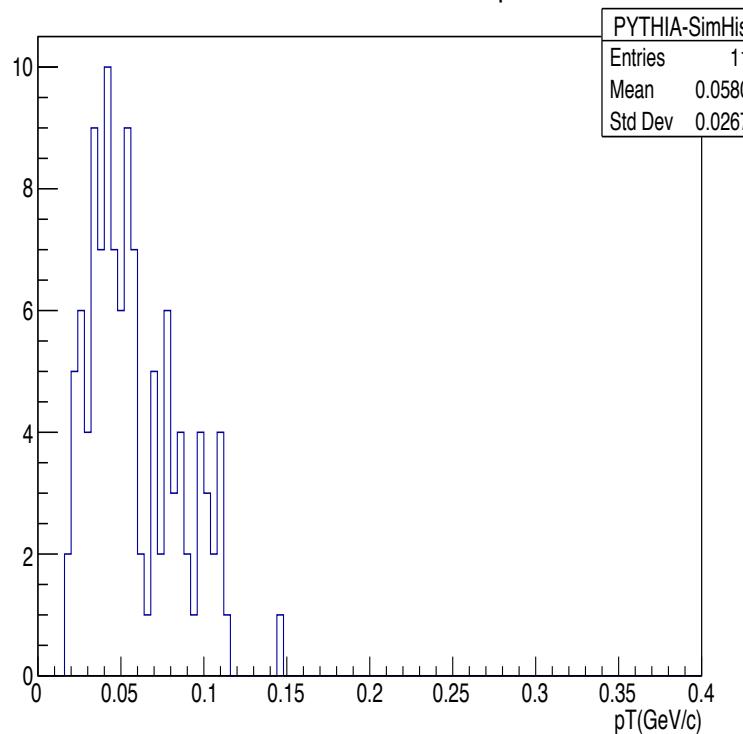

p_T Distribution (PYTHIA MC Samples)

Slide 6

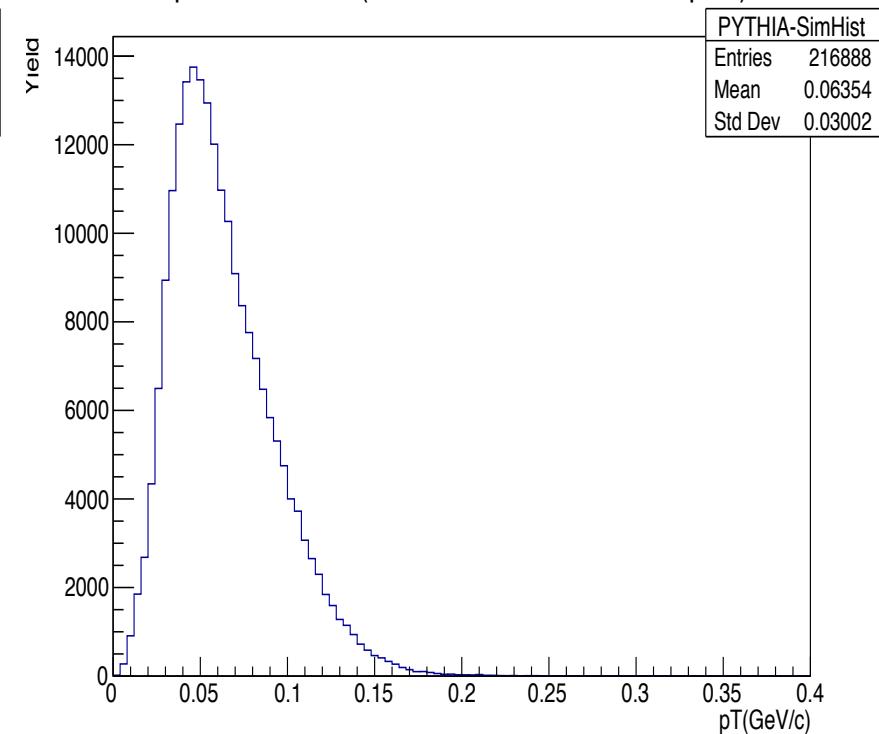

Single Sample

PYTHIA Monte Carlo Sample

Concatenated Samples (2000)

p_T Distribution (PYTHIA Monte Carlo Samples)

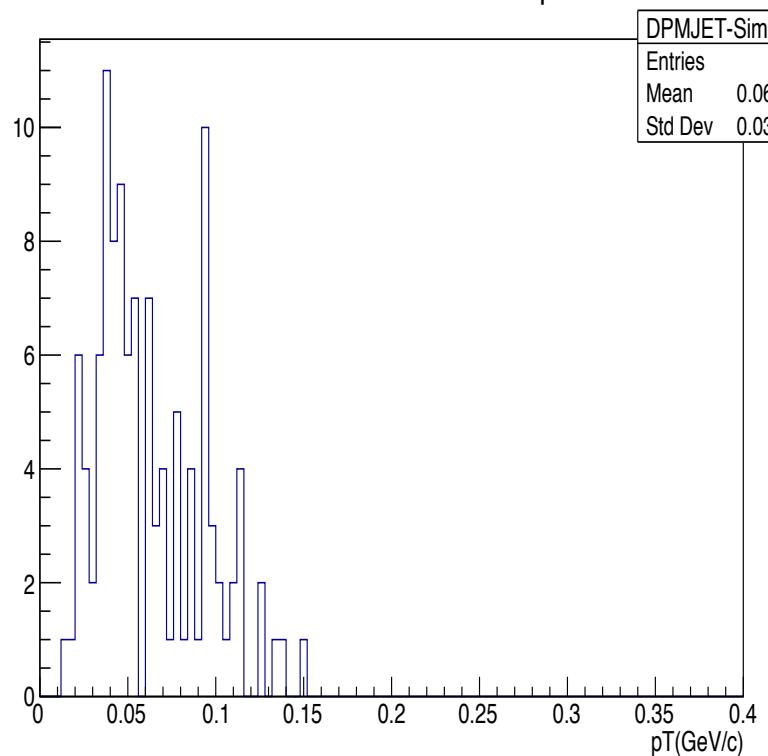

P_T Distribution (DPMJET MC Samples)

Slide 7

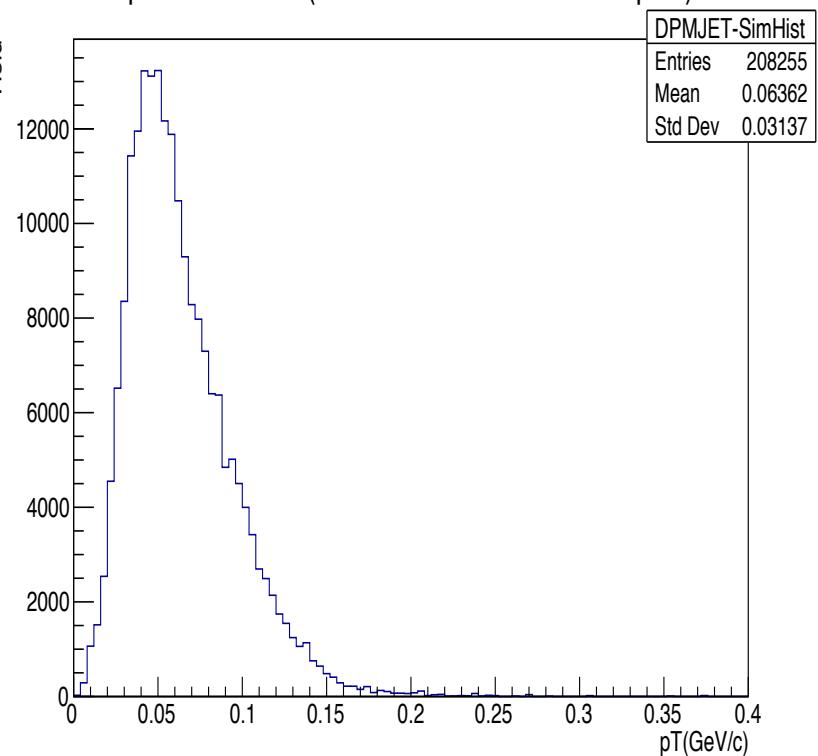

Single Sample

DPMJET Monte Carlo Sample

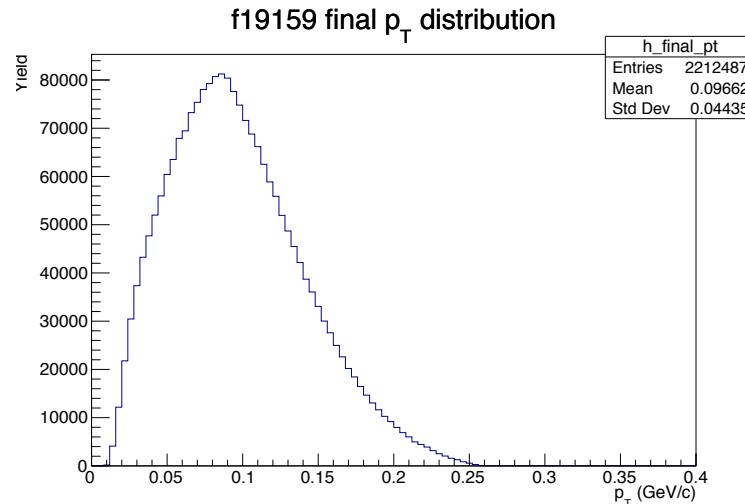

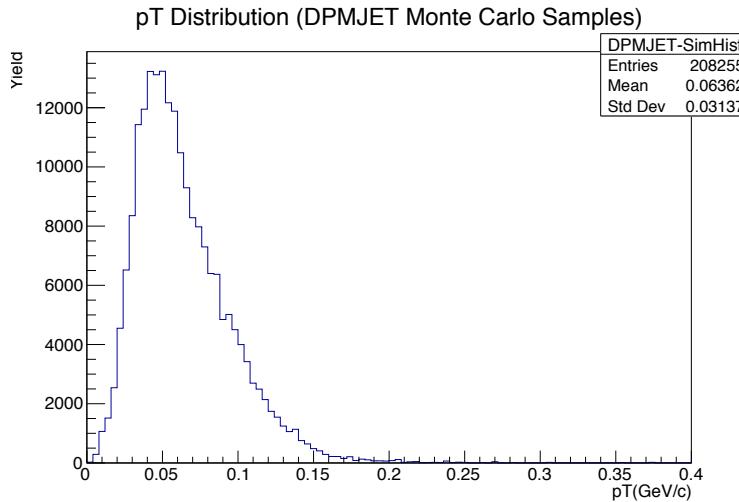

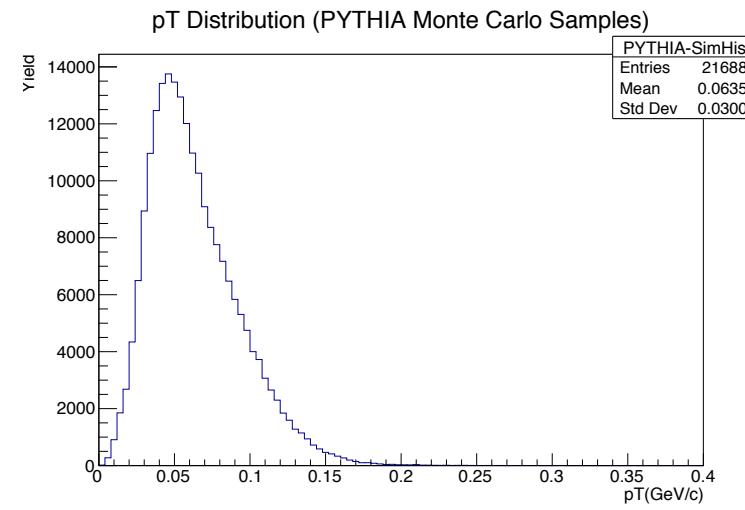

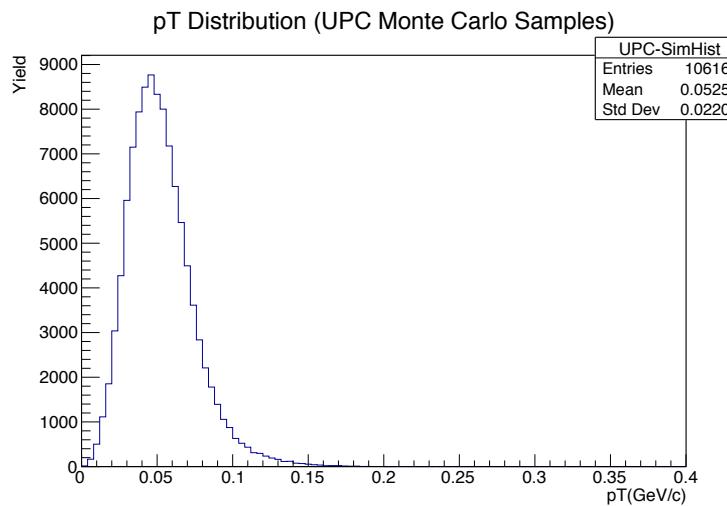

Concatenated Samples (1994)

p_T Distribution (DPMJET Monte Carlo Samples)

p_T Distribution (UPC, PYTHIA, DPMJET, Data)

Slide 8

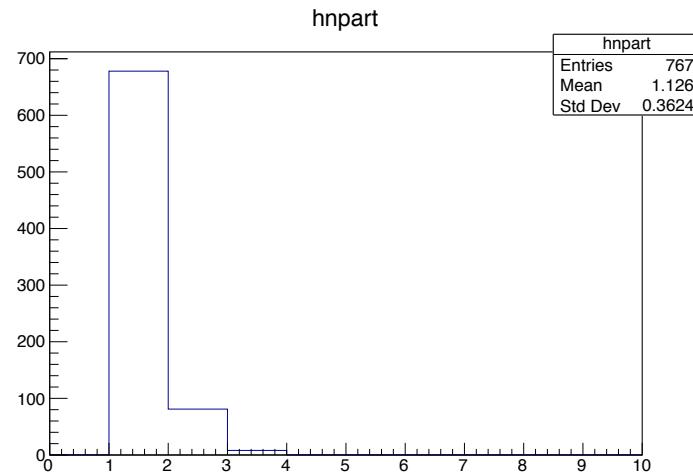

Next Task

Slide 9

- ◎ Make combinations of MC samples (UPC + PYTHIA) or (UPC + DPMJET) and produce a combined P_T distribution for unfolding.
