## Weinberg operator contribution to the hadronic CP violation

*Wednesday, 20 October 2021 12:25 (20 minutes)*

The Weinberg operator (chromo-electric dipole moment of gluon) is a CP violating quantity generated in many candidates of new physics beyond the standard model, and it contributes to observables such as the electric dipole moments (EDM) of the neutron, nuclei and atoms.

In this presentation, we review the present understanding of the Weinberg operator.
