Experimental studies on the high-energy spin physics in the fixed-target experiments

Tuesday, 19 October 2021 15:15 (30 minutes)

Results on high energy spin physics obtained at various facilities with fixed-target experiments will be presented. This includes measurements at JLab, Compass at CERN and HERMES at DESY. The topics covered are essentially the parton helicity and transversity, Sivers effect, GPDs and HEMPs. The extracted polarized PDFs and TMDs will be shown.
