

INTT のデータ読み出し

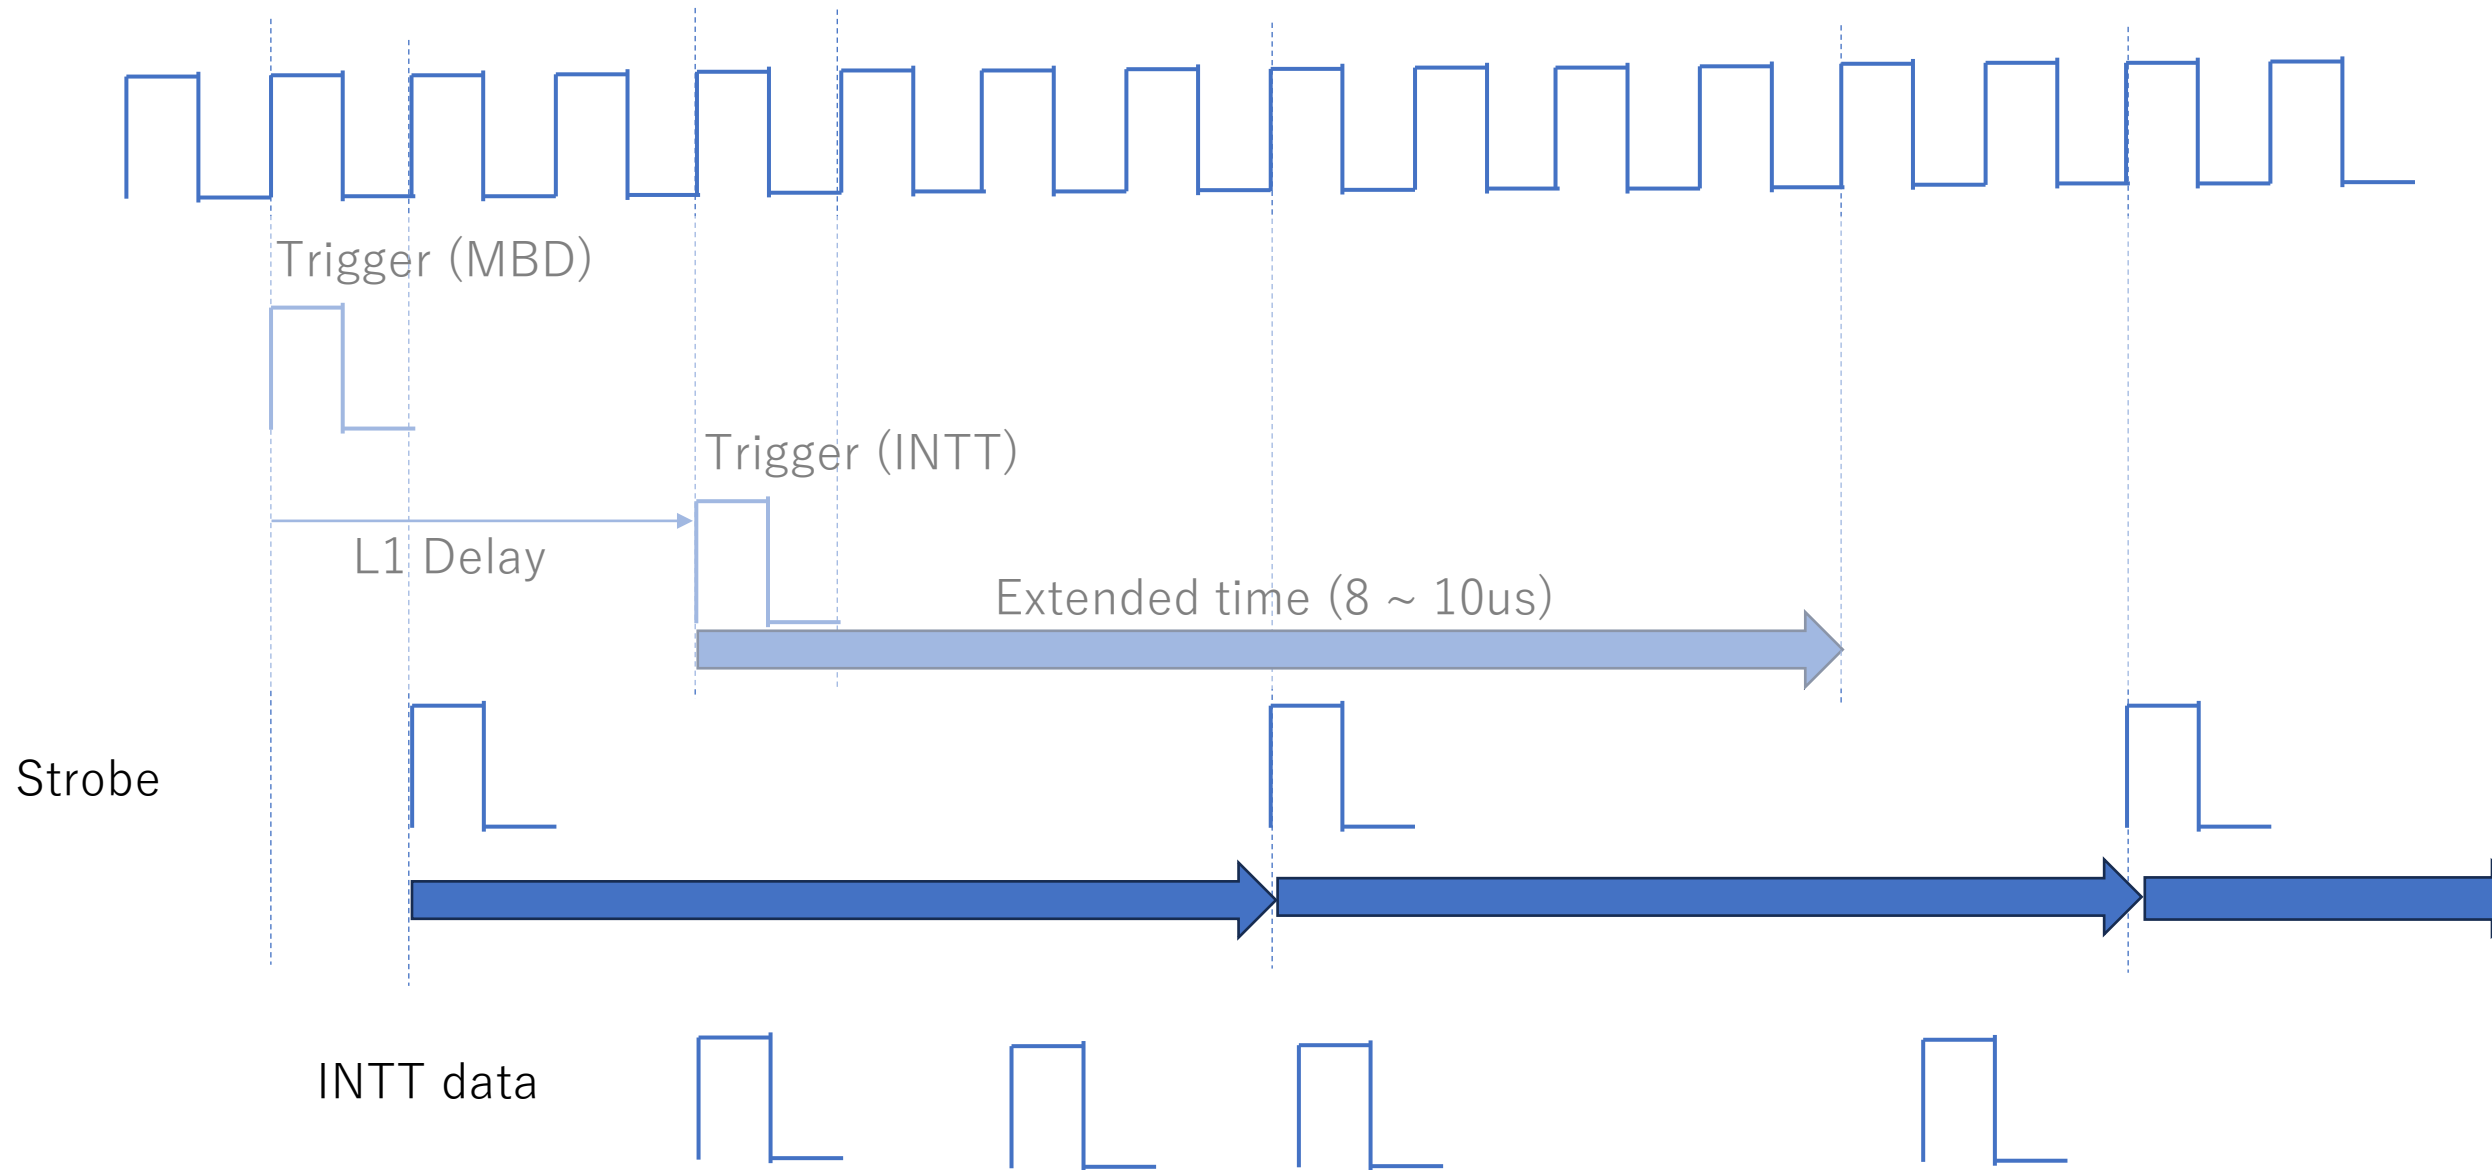

BCO(Beam clock counter) : INTTのビームクロック 7bit
BCO_FULL : sPHENIXのビームクロック 40bit

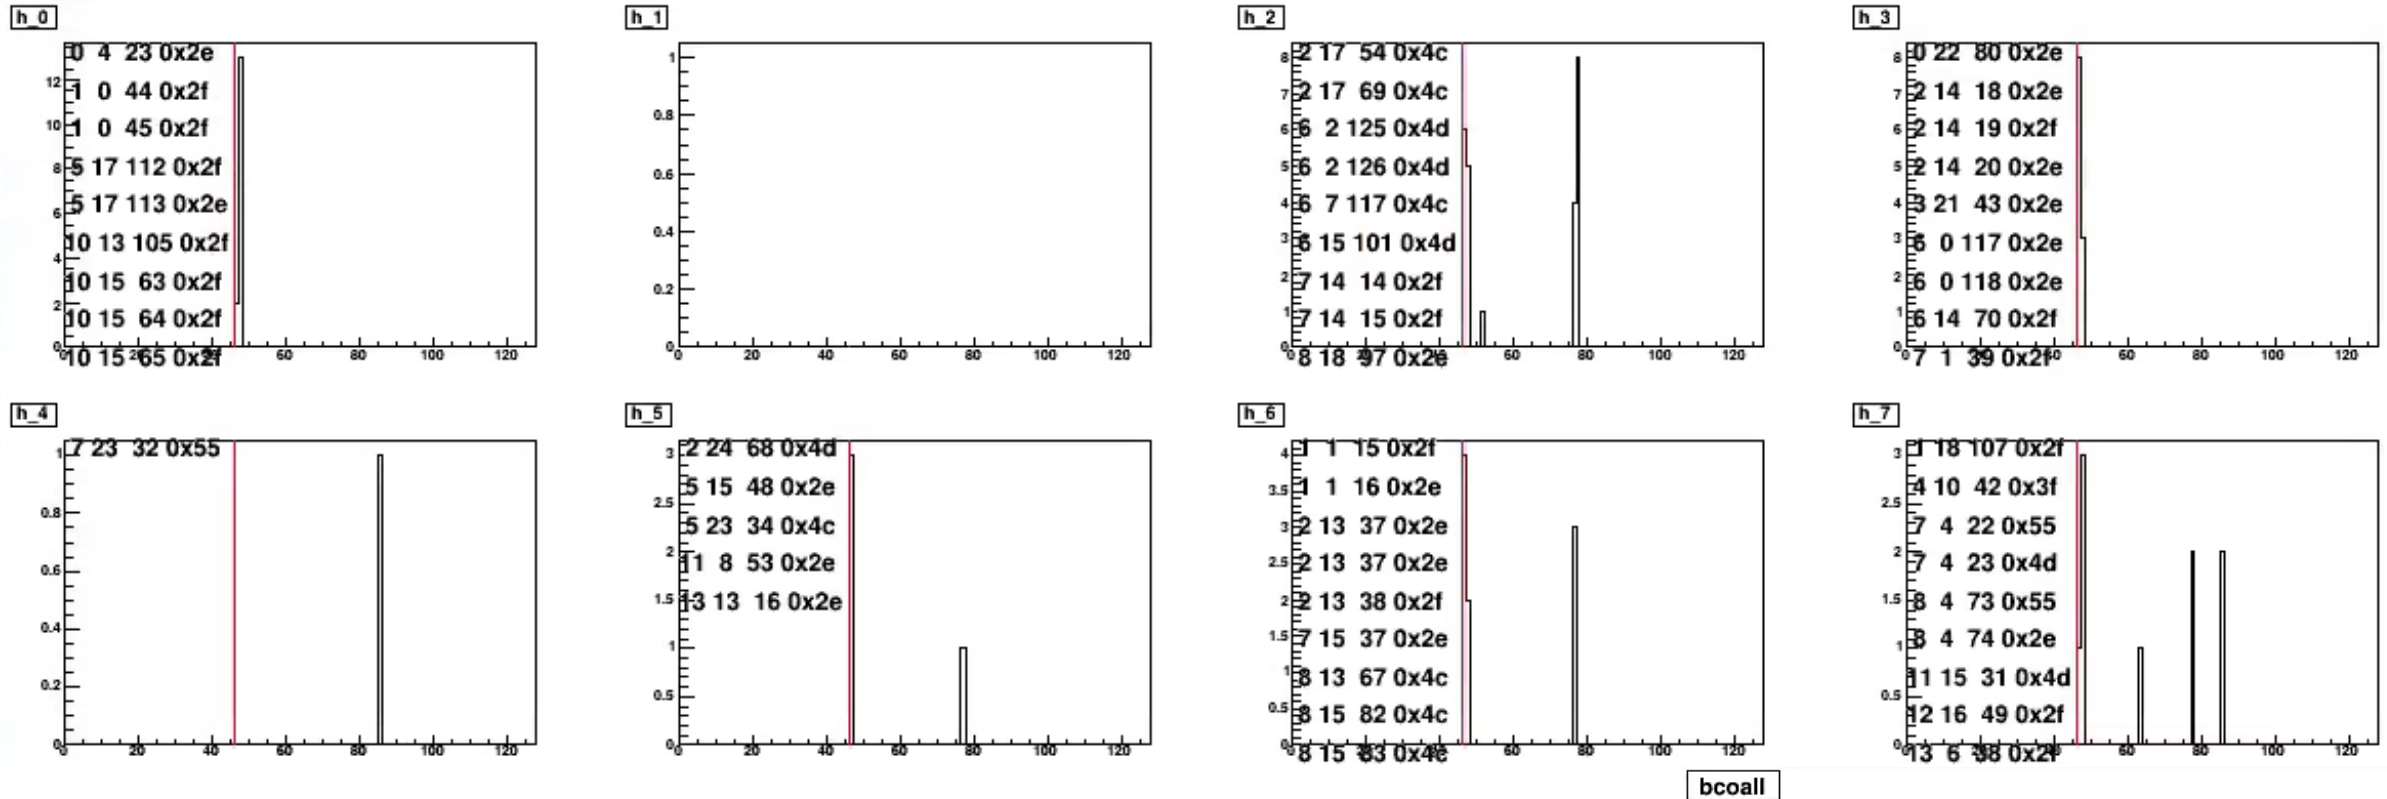

Timing (Trigger mode)

Timing (Stream mode)

Extended Timeの中のイベントをBCOで分離する方法を開発

• TriggerReadOutで取られたデータ (Run40742)

• 1 event のBCO分布

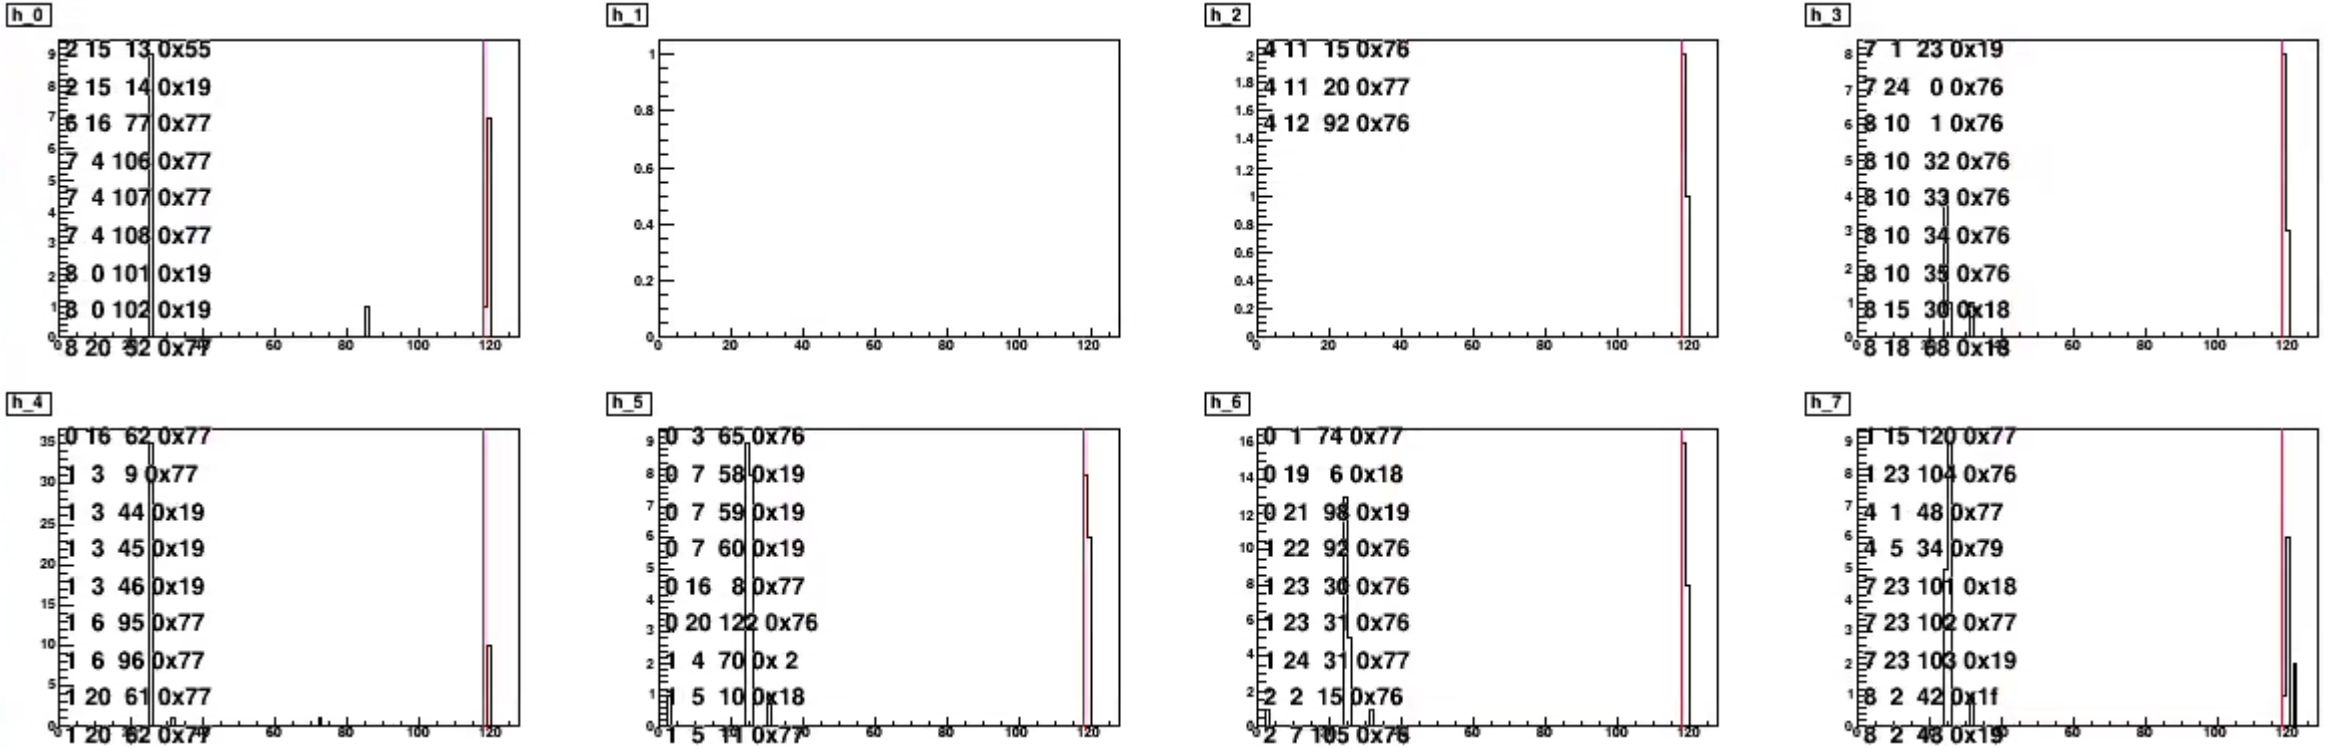

- 赤線：BCO-FULL(+OFFSET)のタイミング
- 上の8分布：FELIX毎のBCO分布
- 横の分布：全FELIX分のタイミング分布
 - 1つのChipで同じBCOを持つ複数のヒットは1つのBCOと数えている

• 赤線とBCOピークが一致している。

- ^{2024/6/7} 2つ目のピークがあり、それがExtendedTimeで測定された別衝突であると考えられる。

Extended Timeの中のイベントをBCOで分離する方法を開発 2

- トリガー(BCOFULL)より左側は、本当は128以降の時刻が、桁上がりして巻き戻って見えている。

bcoall

- STREAMにおけるBCOFULL再構成

- BCOFULL(40)@Strobe
- BCO(7)
- Reco BCOFULL
 - $BCOFULL(39-8) + BCO(7:0) + (\text{offset})$

- BCOFULL とBCOのSTARTは同じ

- クロックのEdgeでカウントアップする。
- ただし
 - BCOFULLは、以前の物から継続。
 - BCOは0から始まる
