

# DAQ Trouble of Stream readout Issue

RIKEN/RBRC  
Itaru Nakagawa

# RCDAQ Disk Write Rate Timeline

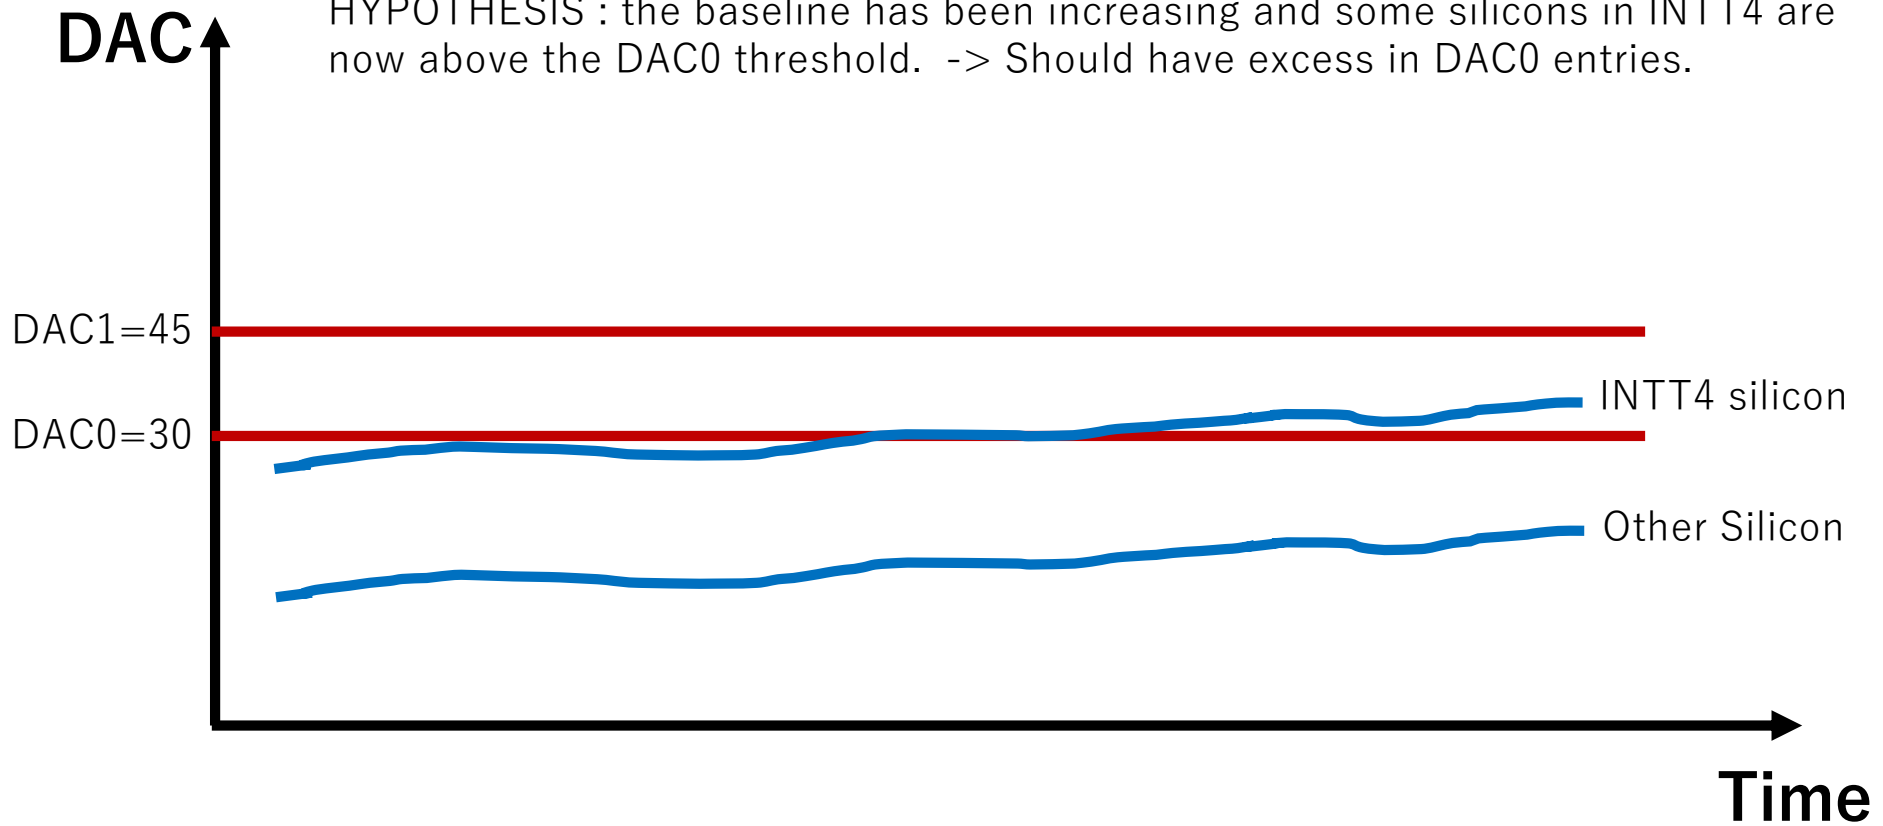

# Process Hit Rate@Felix

# Why rate increased in INTT4?

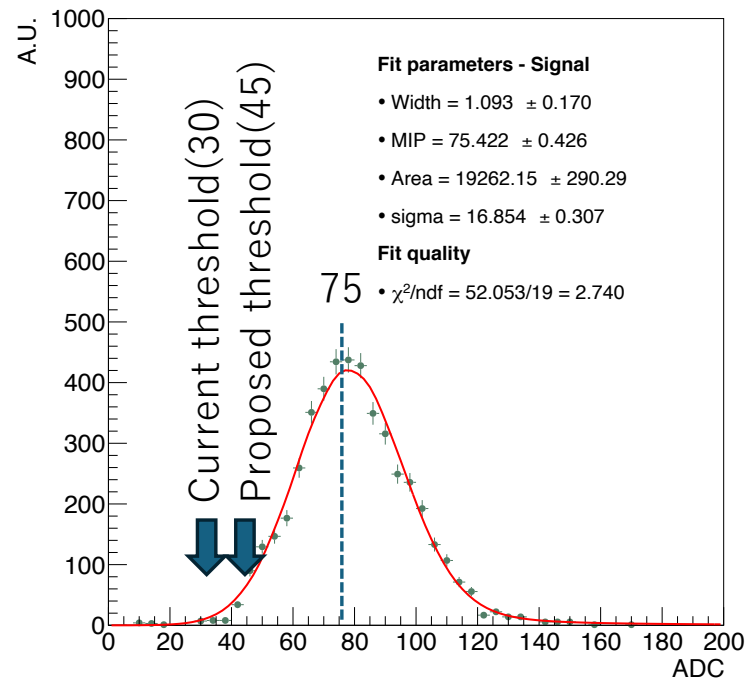

HYPOTHESIS : the baseline has been increasing and some silicons in INTT4 are now above the DAC0 threshold. -> Should have excess in DAC0 entries.

# Efficiency vs. DAC0 Threshold

Testbeam2021, 50 V  
Positron beam, 1 GeV

DAC Scan all I1

- There are two options to restore 2 masked ladders
1. Masking all noisy strips -> massive!
  2. Raise thresholds only for troublesome chips

DAC [ch]	Sigma	Detection Efficiency [%]
30	2.8	99.5
45	2.6	96.5
