

Status and outlook of

COMPASS experiment

Yoshiyuki Miyachi,
Yamagata University

- The COMPASS experiment
- **Status** of COMPASS
 - Selected recent results
 - with the longitudinally polarized target
 - with the transversely polarized target
- **Outlook** of COMPASS II
 - GPD Program
 - Drell-Yan Program
 - Schedule
- Summary

The COMPASS Experiment

COMPASS at CERN

Nucleon Structure
Hadron Spectroscopy

Lake LEMAN

LHC

COMPASS

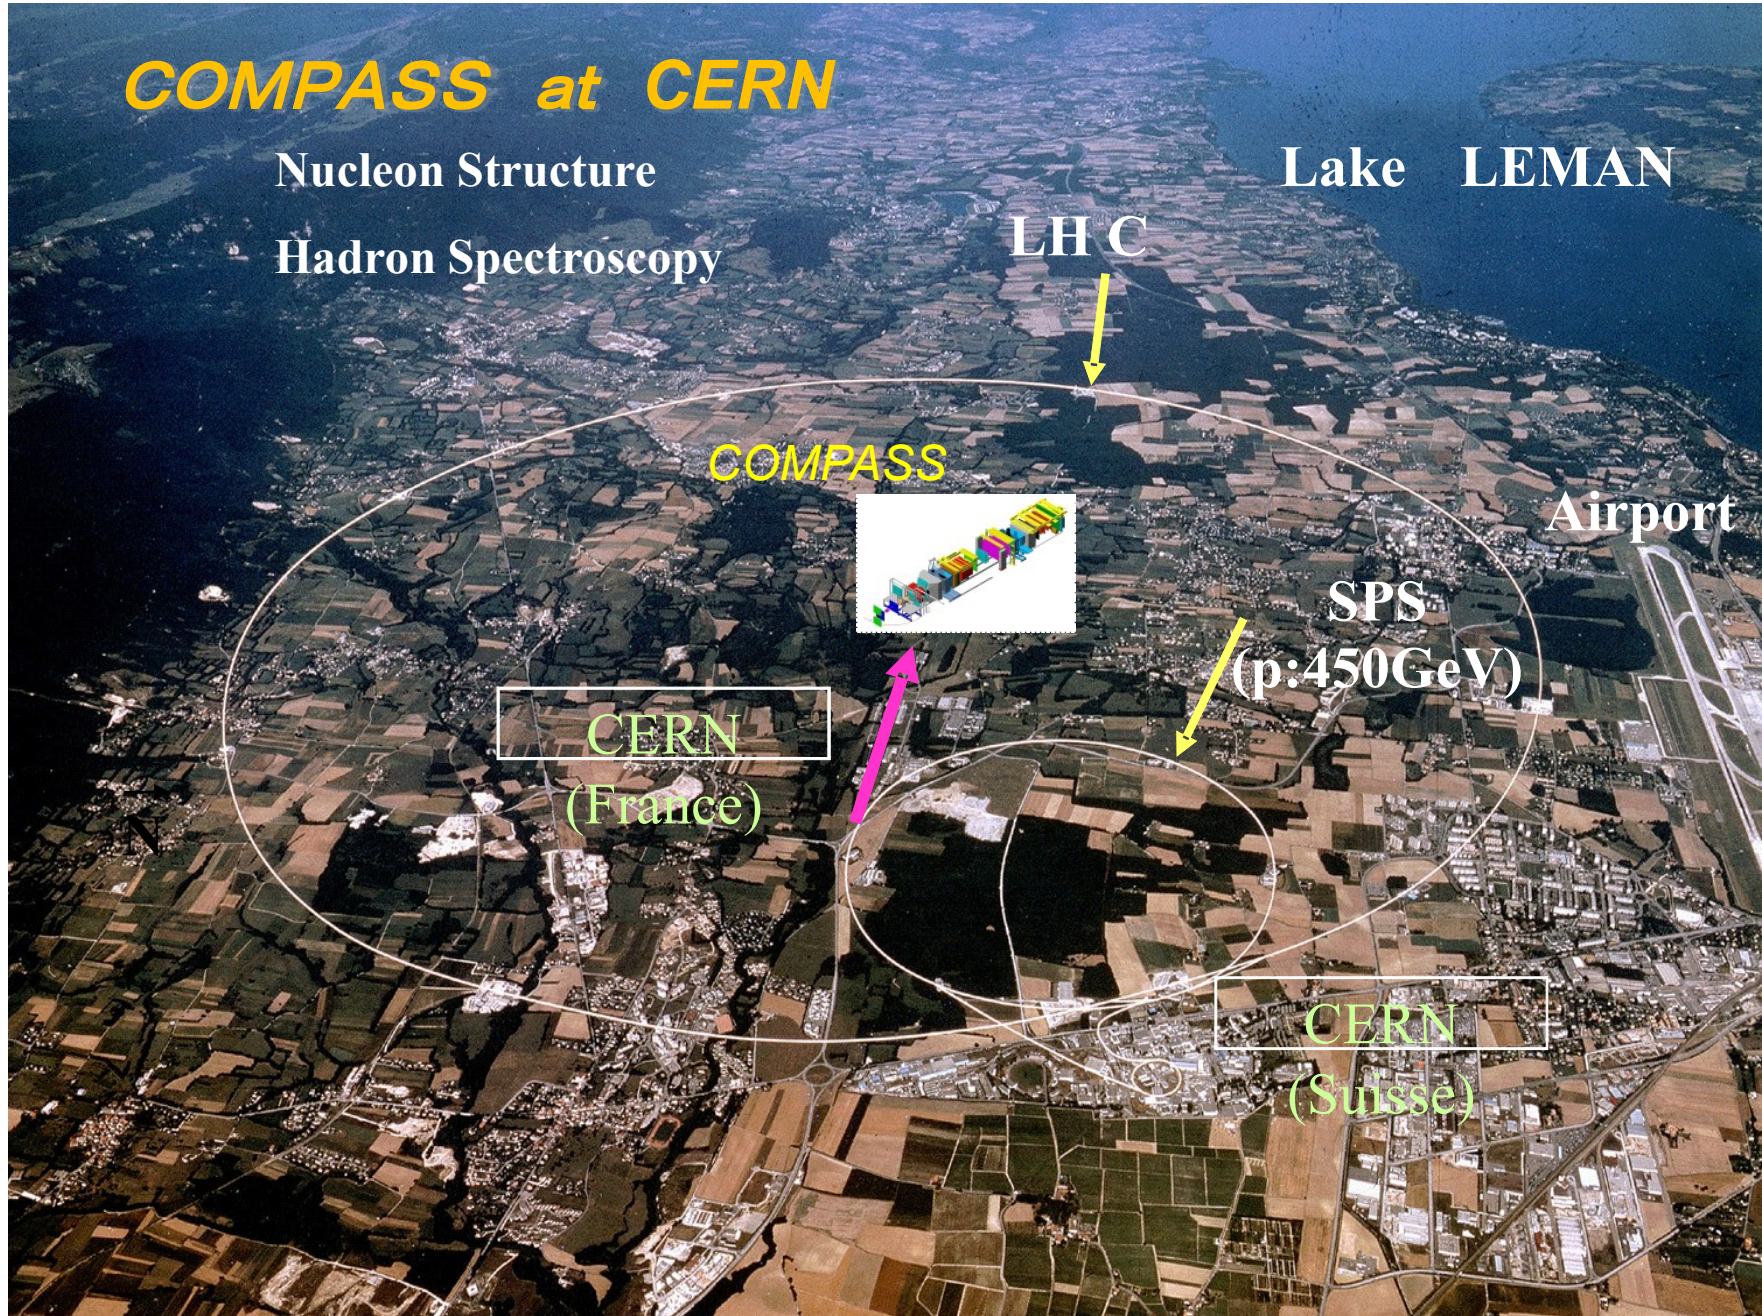

Airport

SPS
(p:450GeV)

CERN
(France)

CERN
(Suisse)

COMPASS Spectrometer

two stage spectrometer

- Large Angle Spectrometer (SM1)
- Small Angle Spectrometer (SM2)

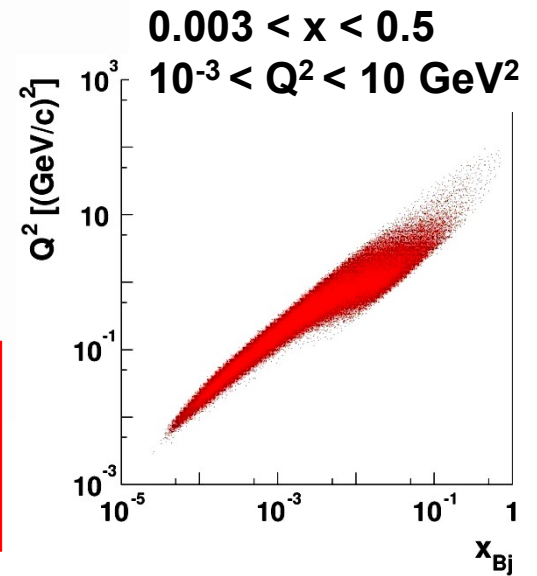

tracking, calorimetry, PID

Configuration in Muon program

SciFi	Straws
Silicon	SDC
Micromegas	MWPC
GEMs	W45

- high energy beam
- broad kinematical range
- large angular acceptance

COMPASS Target system

YAMAGATA UNIVERSITY

Solid polarized target operated in **Dynamic Nuclear Polarization** technique with a dilution refrigerator

PT magnet:

→ +180~-180 mrad geometrical acceptance

To match larger acceptance:

→ 3 target cells: reduction of false asymmetries

Target:

→ NH_3 for proton, ${}^6\text{LiD}$ for deuteron

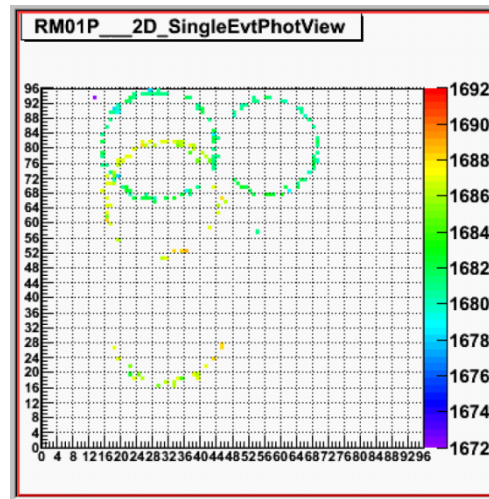

→ longitudinal & transverse mode available

→ very long relaxation time (~ 4000 h)

→ magnetic field rotation without polarization loss

→ Polarization of NH_3 -92%, +88%, -83%

- radiator gas: C_4F_{10}
- mirror wall: 20 m² surface
- photon-detectors:
 - outer part (75%) MWPC(pad RO) with CsI cathode
 - inner part(25%) 576 MAPMTs with indiv. telescope

threshold momenta

- $p_\pi = 2 \text{ GeV/c}$
- $p_K = 9 \text{ GeV/c}$
- $p_p = 17 \text{ GeV/c}$

Installed in 2005,
Used in data taking from 2006

Status of COMPASS

Inclusive and Semi-inclusive DIS with

- Longitudinally polarized nucleon target
- Transversely polarized nucleon target

- **2002** Data taking started
muon program with **160 GeV** polarized muon
- **2002-2006** ^6LiD polarized target (pol. deuterons)
L-mode: 80 / T-mode: 20 , $\Delta G/G$ measurement
2005 no data taking
- **2007** NH_3 polarized target (pol. protons)
L-mode: 50 /T-mode: 50
- **2008, 2009** hadron program with hadron beam at 190 GeV
- **2010** NH_3 polarized target (pol. protons) only T-mode
- **2011** ditto only L-mode

Selected COMPASS results

g_1

The spin-dependent structure function of the proton g_1^p and a Test of the Bjorken Sum Rule,	PLB 690 (2010) 466–472
Spin asymmetry A_1^d and the spin-dependent structure function g_1^d of the deuteron at low values of x and Q^2 ,	PLB 647 (2007) 330–340
The Deuteron Spin-dependent Structure Function g_1^d and its First Moment,	PLB 647 (2007) 8–17
Measurement of the spin structure of the deuteron in the DIS region,	PLB 612 (2005) 154

Δq

Quark Helicity Distributions from Longitudinal Spin Asymmetries in Muon-Proton and Muon-Deuteron Scattering,	PLB 693 (2010) 227–235
Flavour Separation of Helicity Distributions from Deep Inelastic Muon-Deuteron Scattering,	PLB 680 (2009) 217–224
The Polarised Valence Quark Distribution from semi-inclusive DIS,	PLB 660 (2008) 458–465

ΔG

Gluon Polarisation in the Nucleon and Longitudinal Double Spin Asymmetries from Open Charm Muoproduction,	PLB 676 (2009) 31–38
Gluon polarization in the nucleon from quasi-real photoproduction of high-pT hadron pairs,	PLB 633 (2006) 25–32

SSA

Azimuthal asymmetries of charged hadrons produced by high energy muons off longitudinally polarized deuterons,	EPJC 70 (2010) 39–49
--	----------------------

Sivers

Measurement of the Collins and Sivers asymmetries on transversely polarised protons,	PLB 692 (2010) 240–246
--	------------------------

Collins

Collins and Sivers asymmetries for pions and kaons in muon-deuteron DIS,	PLB 673 (2009) 127–135
--	------------------------

...

A new measurement of the Collins and Sivers asymmetries on a transversely polarised deuteron target,	NP B765 (2007) 31–70
--	----------------------

First measurement of the transverse spin asymmetries of the deuteron in semi-inclusive deep inelastic scattering,	PRL 94 (2005) 202002
---	----------------------

Inclusive measurements

Proton

Deuteron

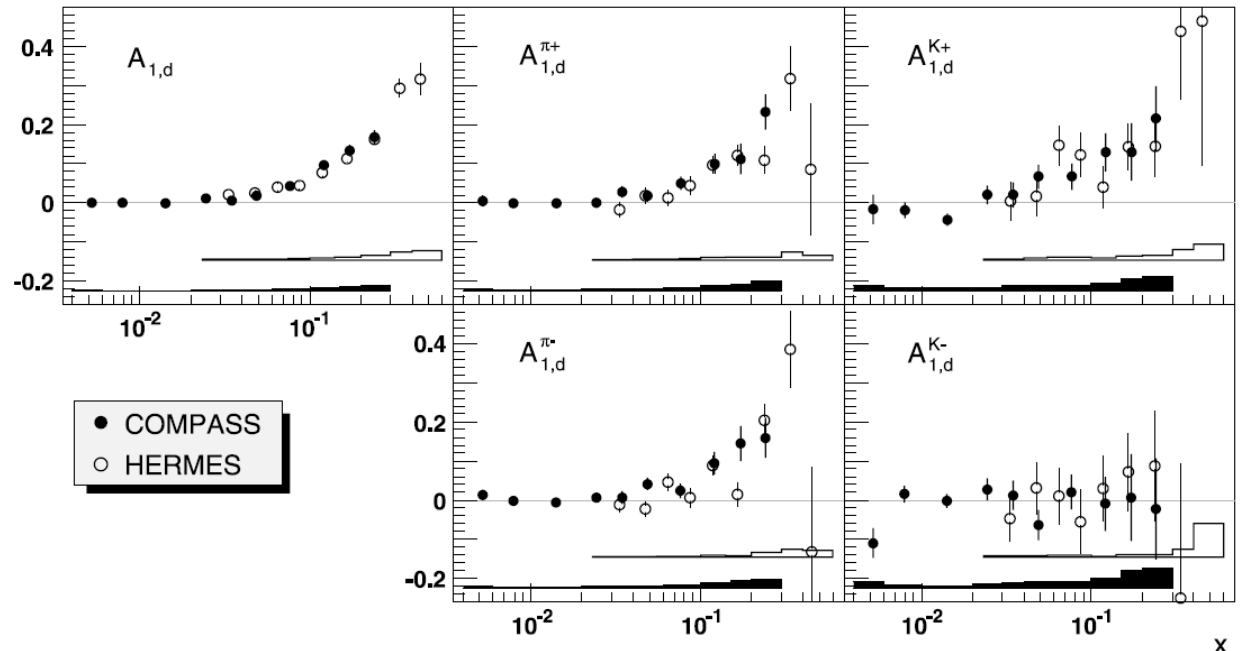

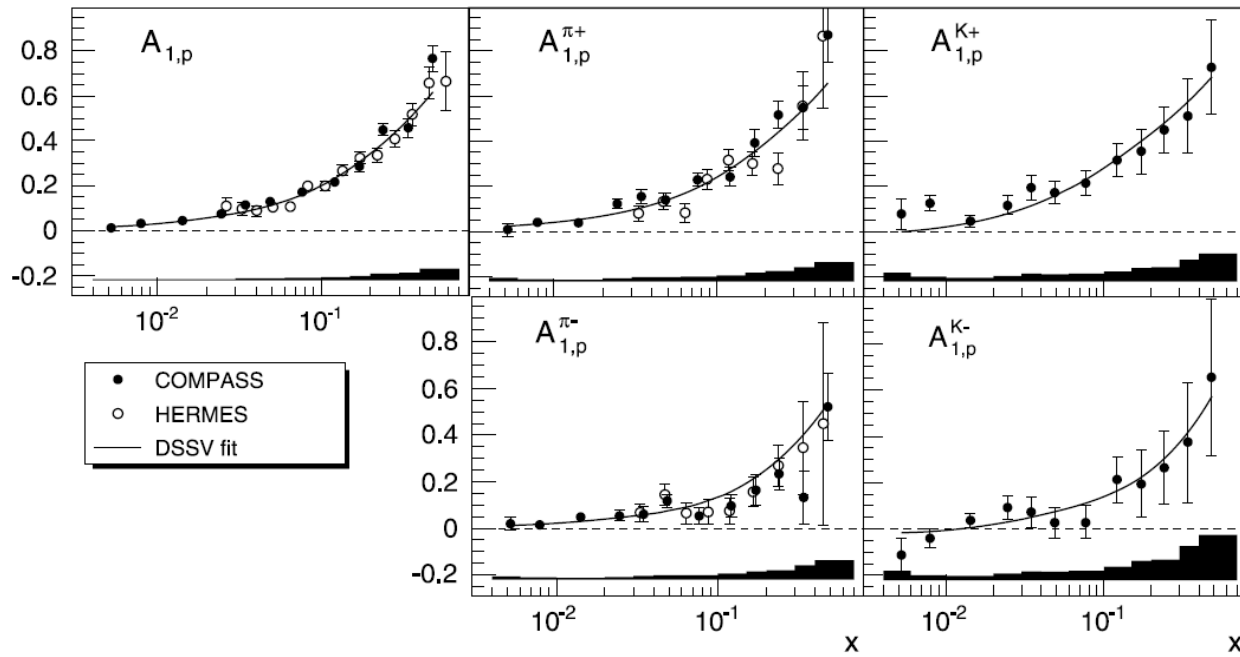

$$\Gamma_1^d(Q^2 = 3 \text{ GeV}^2) = 0.0502 \pm 0.028 \pm 0.020 \pm 0.051$$

$$\Delta \Sigma = 0.35 \pm 0.03 \pm 0.05$$

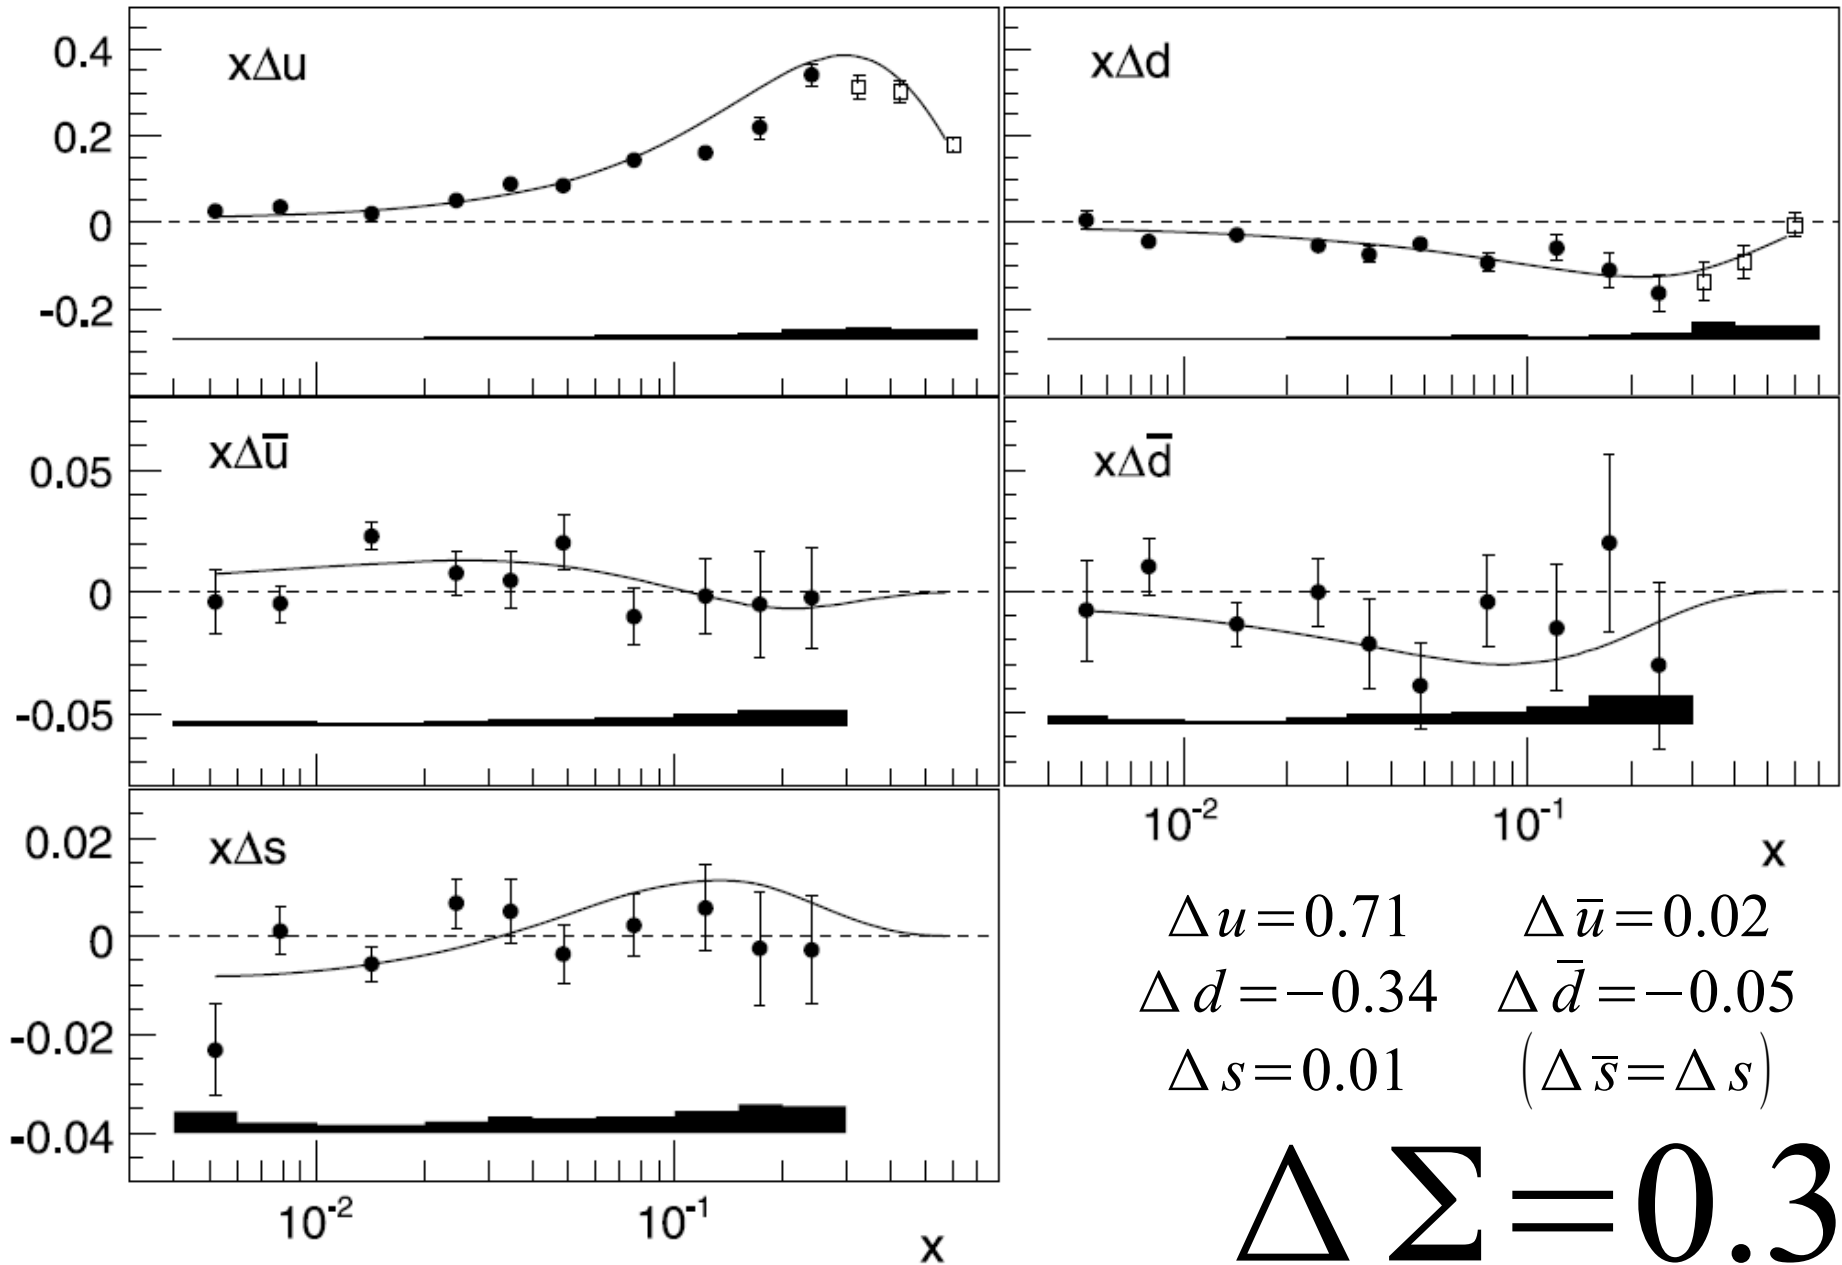

$$\Delta S = -0.08 \pm 0.01 \pm 0.02$$

Semi-inclusive measurements: Flavor tagging

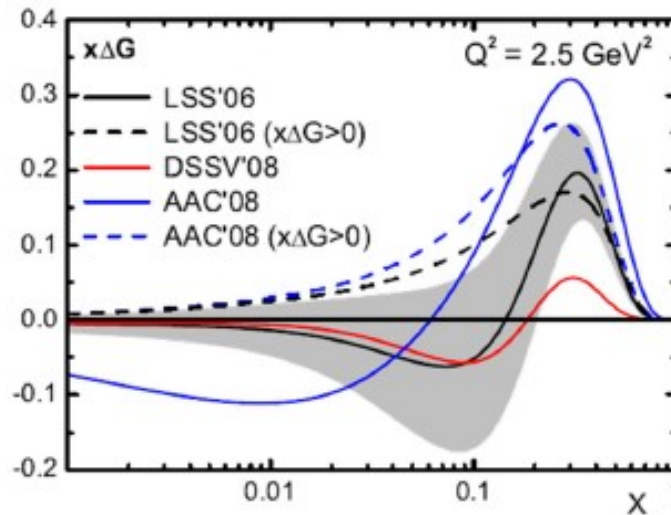

Δq : Flavor decomposition

Gluon Polarization

From Global Fit

Direct measurements

Open charm

High-pt hadron

Proton spin budget

$$\Delta \Sigma = 0.32$$

$$\frac{1}{2} =$$

$$\begin{array}{ll} \Delta u = 0.71 & \Delta \bar{u} = 0.02 \\ \Delta d = -0.34 & \Delta \bar{d} = -0.05 \\ \Delta s = 0.01 & (\Delta \bar{s} = \Delta s) \end{array}$$

$$g_1^d \rightarrow \Delta \Sigma = 0.35$$

$$|\Delta G| \sim 0.2 - 0.3$$

from Global analysis

→ Becomes larger ?

Sivers Asymmetry

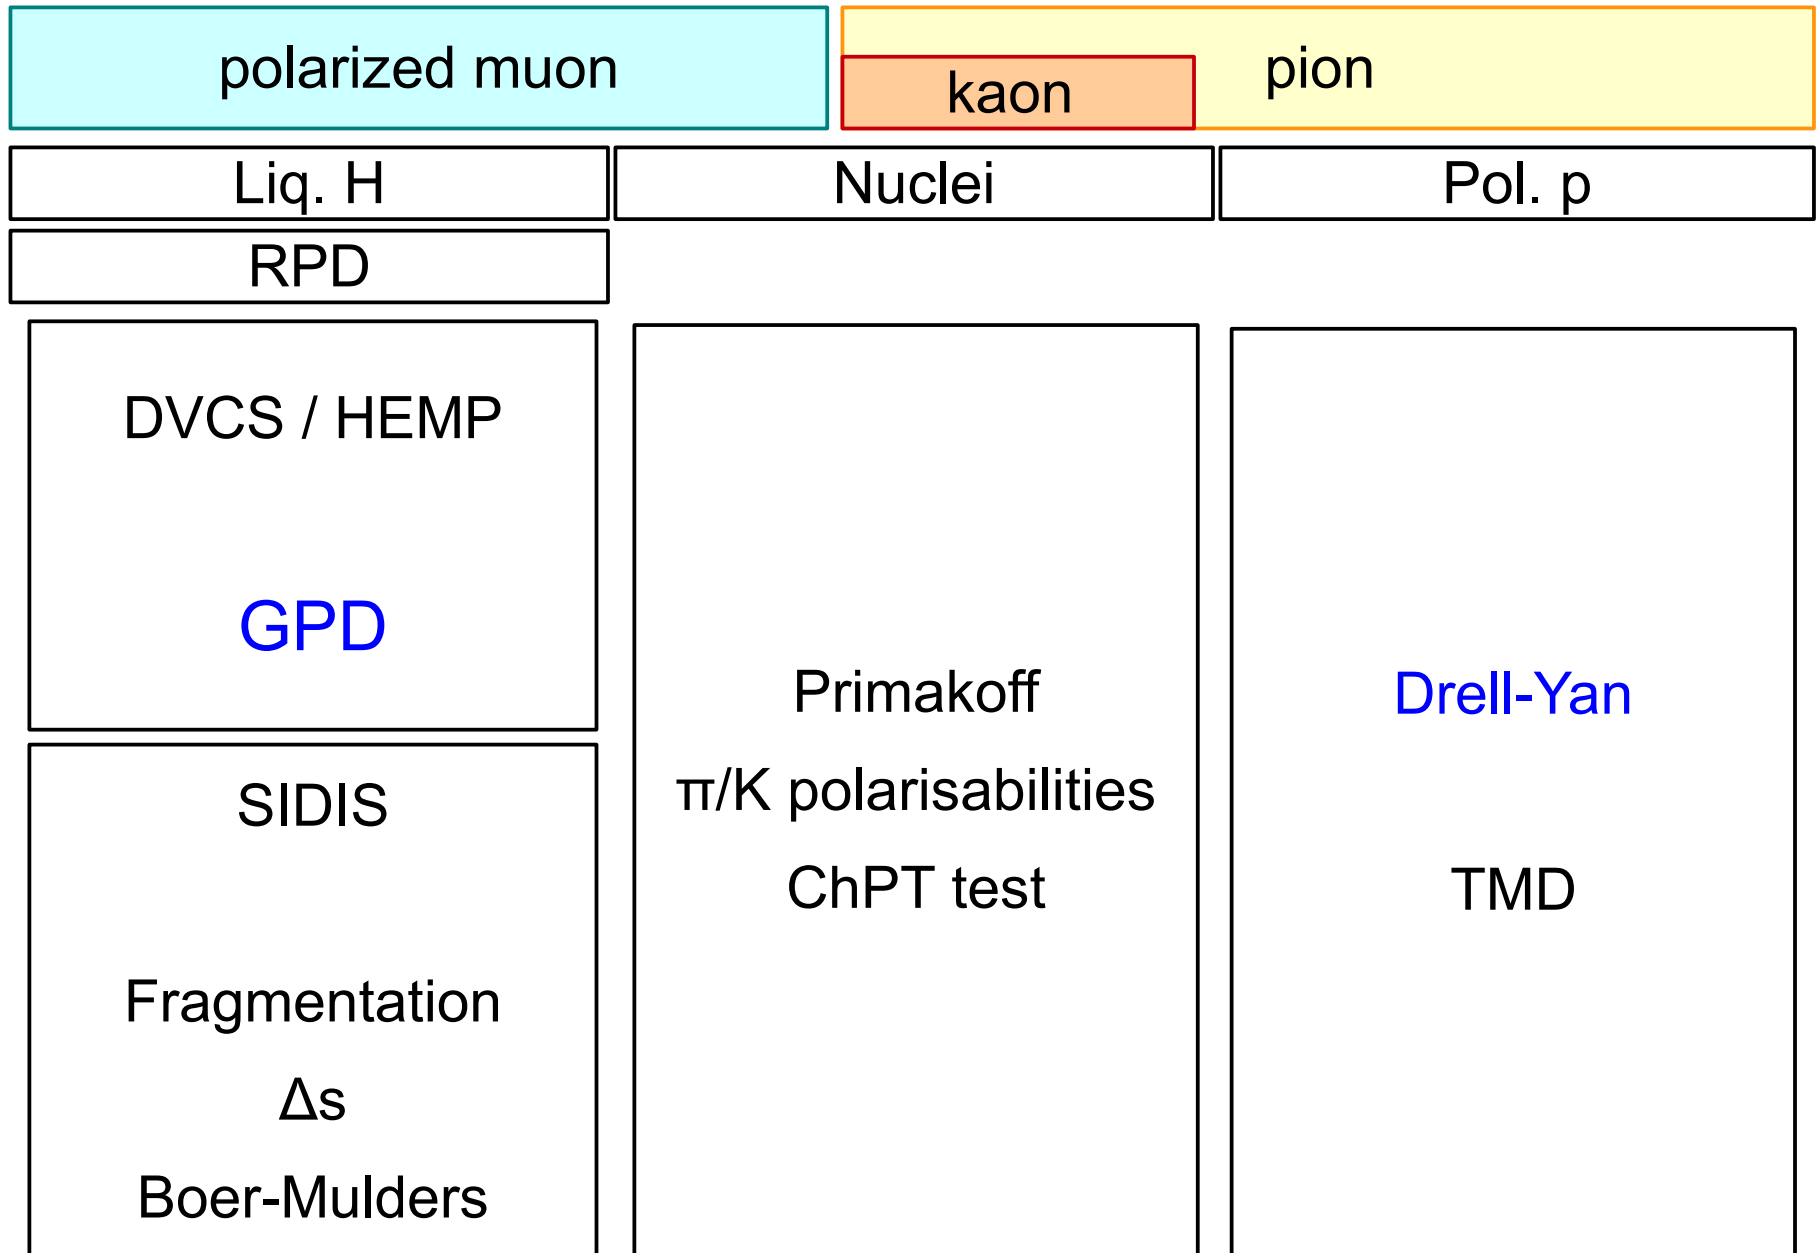

Collins Asymmetry

Outlook of COMPASS II

- GPD Program
- Drell-Yan Program

GPD and Proton 3D structure

YAMAGATA UNIVERSITY

Proton form factors,
transverse charge & current densities

Correlated quark momentum and helicity distributions in transverse space - GPDs

Structure functions, quark longitudinal momentum & helicity distributions

Elastic scattering

Hard Exclusive Production

DIS

GPD and Nucleon tomography

YAMAGATA UNIVERSITY

$$q^f(x, \mathbf{b}_\perp) = \int \frac{d^2 \Delta_\perp}{(2\pi)^2} e^{-i\Delta_\perp \cdot \mathbf{b}_\perp} H^f(x, 0, -\Delta_\perp^2).$$

COMPASS II: GPD

YAMAGATA UNIVERSITY

2.5m LH2 target
+ 4m RPD (called CAMERA)

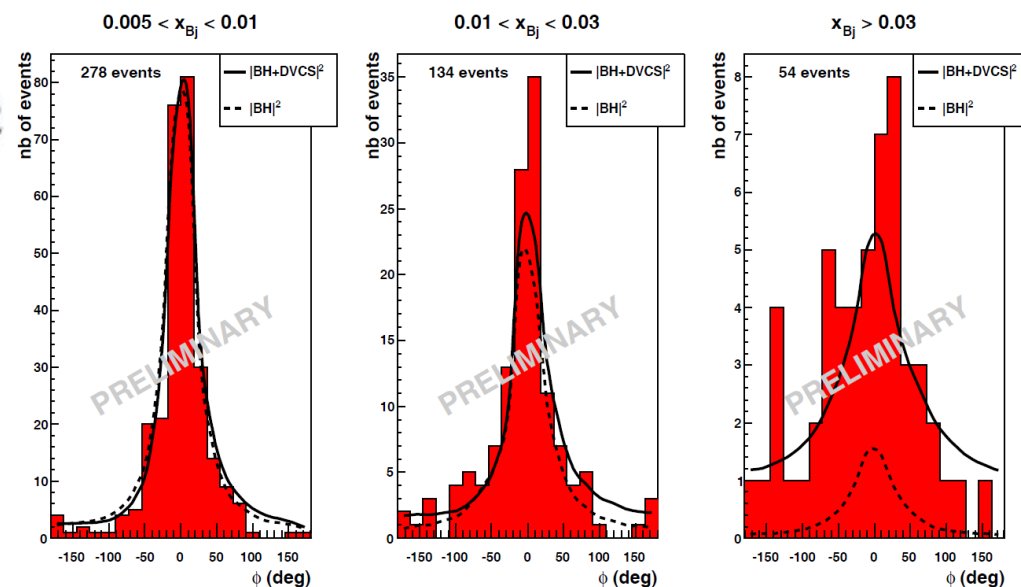

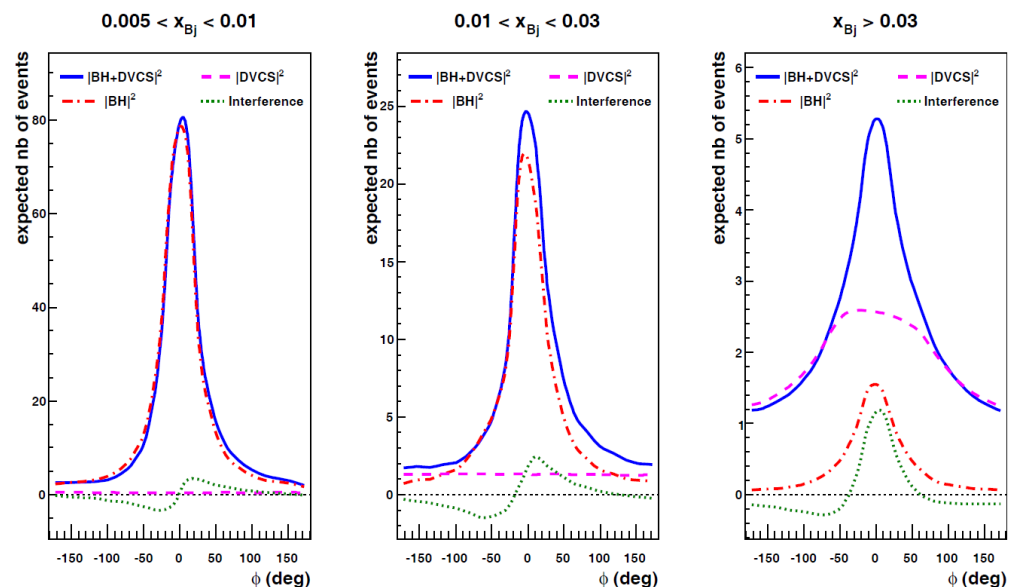

+ ECAL0 before SM1
(for higher acceptance in large X_B)

RPD

DVCS @ COMPASS II

YAMAGATA UNIVERSITY

$$d\sigma(\mu N \rightarrow \mu N \gamma) \propto |\mathcal{A}_{BH}|^2 + |\mathcal{A}_{DVCS}|^2 + \underbrace{\mathcal{A}_{BH}\mathcal{A}_{DVCS}^* + \mathcal{A}_{BH}^*\mathcal{A}_{DVCS}}_I$$

The beam charge & spin sum of cross sections

$$\mathcal{S}_{CS,U} \equiv d\sigma^{\leftarrow+} + d\sigma^{\leftarrow-} = 2(d\sigma^{BH} + d\sigma_{unpol}^{DVCS} + e_{\mu} P_{\mu} \text{Im } I)$$

$\longrightarrow s_1^I \sin \phi + s_2^I \sin 2\phi$
 $s_1^I \propto \text{Im}(F_1, \mathcal{H})$

The beam charge & spin difference of cross sections

$$\mathcal{D}_{CS,U} \equiv d\sigma^{\leftarrow+} - d\sigma^{\leftarrow-} = 2(P_{\mu} d\sigma_{pol}^{DVCS} + e_{\mu} \text{Re } I)$$

$\longrightarrow c_0^I + c_1^I \cos \phi + c_2^I \cos 2\phi + c_3^I \cos 3\phi$
 $c_1^I \propto \text{Re}(F_1, \mathcal{H})$

The beam charge & spin asymmetry of cross sections

$$\mathcal{A}_{CS,U} \equiv \frac{d\sigma^{\leftarrow+} - d\sigma^{\leftarrow-}}{d\sigma^{\leftarrow+} + d\sigma^{\leftarrow-}} = \frac{\mathcal{D}_{CS,U}}{\mathcal{S}_{CS,U}}$$

Transverse imaging

$$d\sigma/dt \propto \exp(-B(x_B)|t|)$$

$$B(x_B) = B_0 + 2\alpha' \log\left(\frac{x_0}{x_B}\right)$$

$$\Rightarrow \left\langle r_{\perp}^2(x_B) \right\rangle \sim 2 \cdot B(x_B)$$

Projection of the azimuthal distributions

$$D_{CS,U} \equiv d\sigma^{\leftarrow+} - d\sigma^{\rightarrow-}$$

$$c_1^I \propto \text{Re}(F_I, \mathcal{H})$$

$$A_{CS,U} \equiv \frac{d\sigma^{\leftarrow+} - d\sigma^{\rightarrow-}}{d\sigma^{\leftarrow+} + d\sigma^{\rightarrow-}}$$

SIDIS data from the COMPASS GPD run

YAMAGATA UNIVERSITY

SIDIS measurements is possible with the GPD setup.

Hadron multiplicities

→ fragmentation functions

→ strange quark distribution

$$F_{UU} \sim (f_1) \otimes (D_1)$$

Boer-Mulders functions

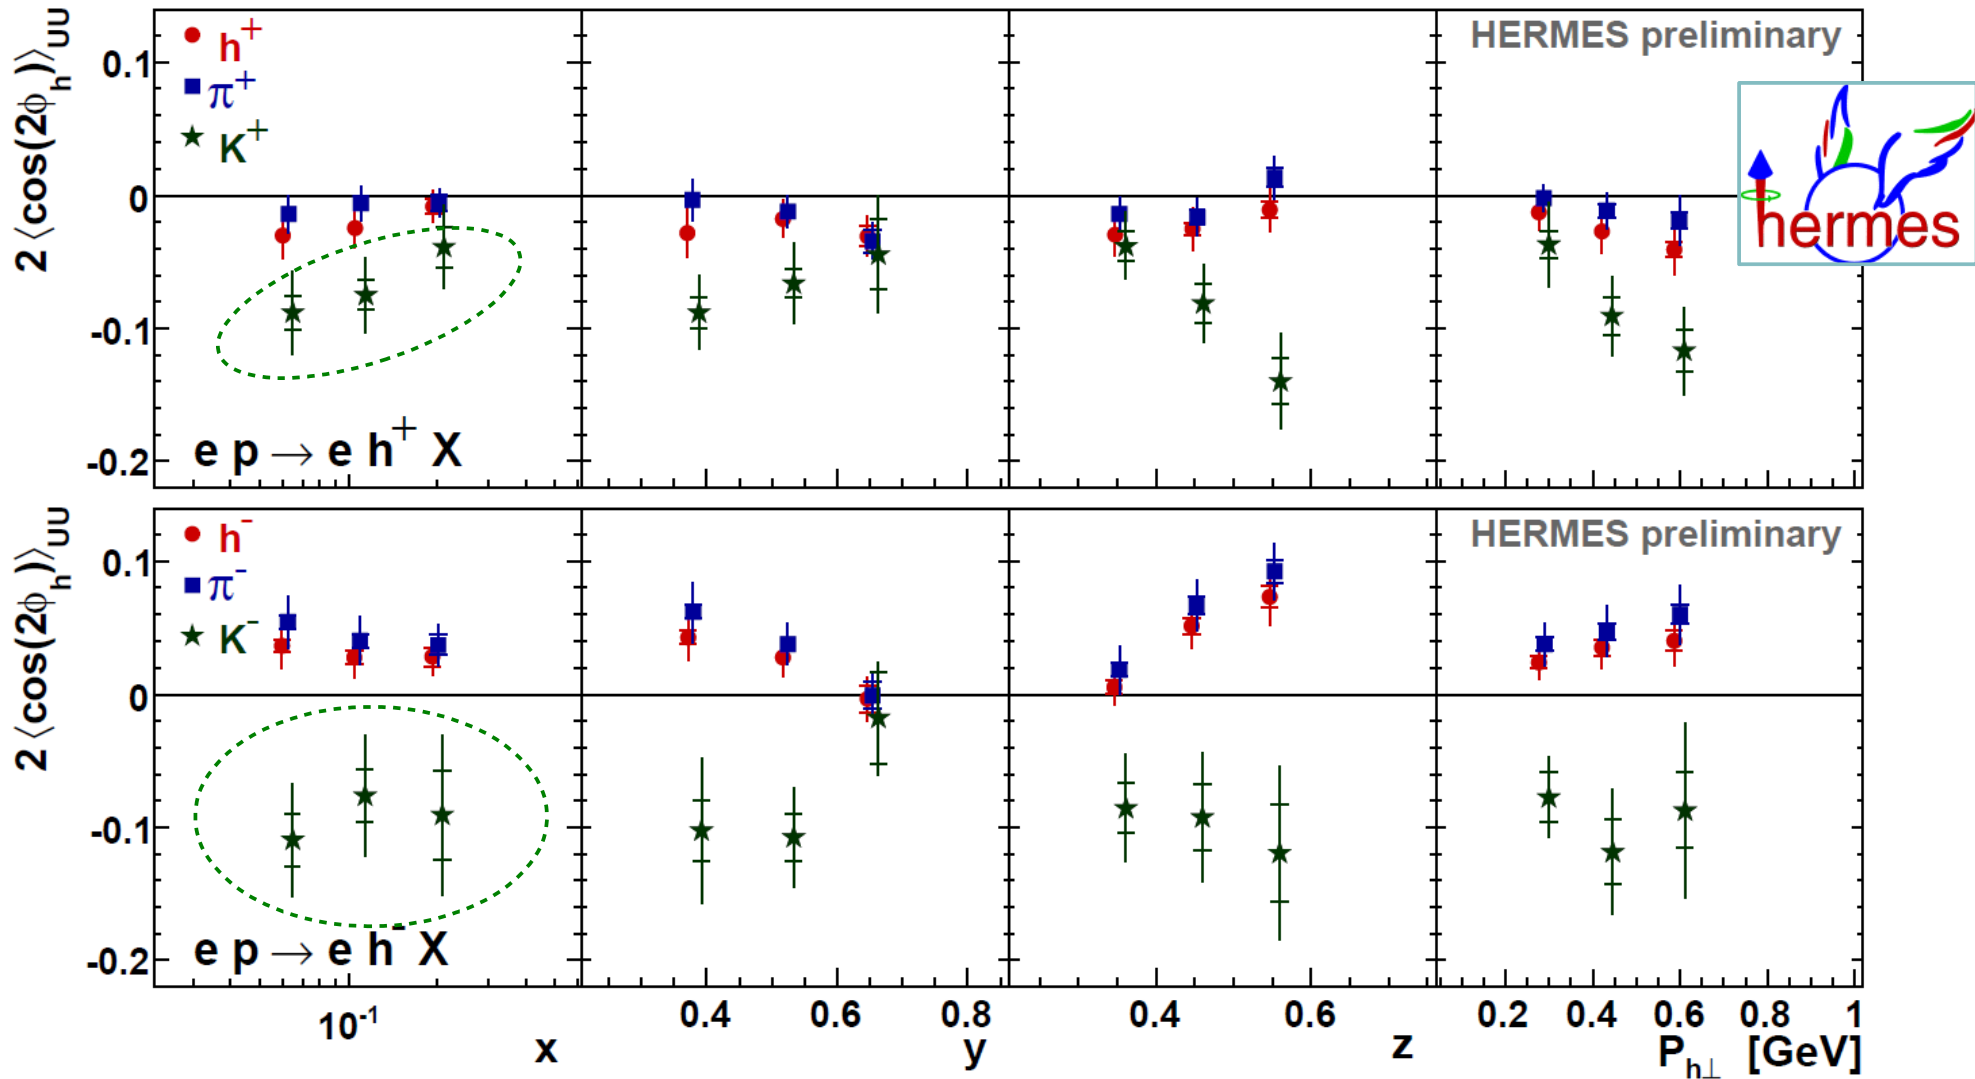

$$F_{UU}^{\cos 2\pi} \sim (BM) \otimes (Collins)$$

Kaon $\cos 2\phi$ @ HERMES

YAMAGATA UNIVERSITY

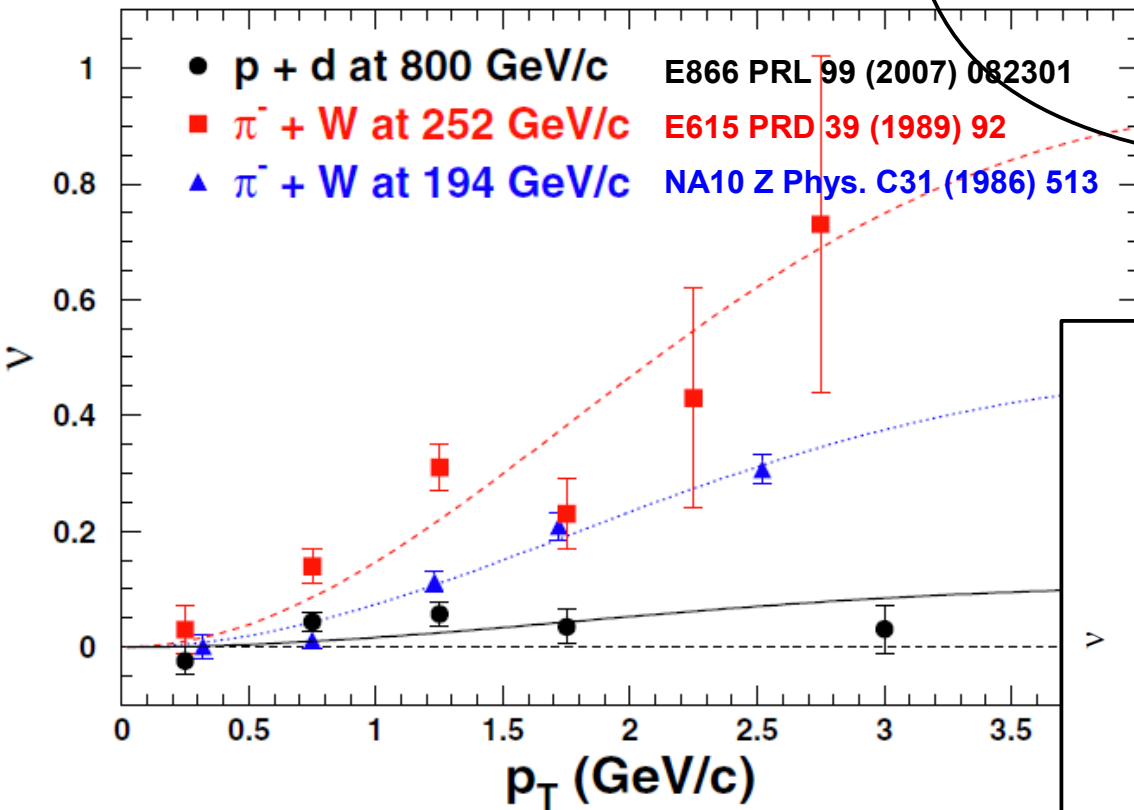

To be checked in COMPASS II

Boer-Mulders in Drell-Yan

$$d\sigma \propto 1 + \lambda \cos^2 \theta + \mu \sin 2\theta \cos \phi + \frac{\nu}{2} \sin^2 \theta \cos 2\phi$$

COMPASS II: Drell-Yan

YAMAGATA UNIVERSITY

190 GeV/c pion beam

Pol. NH3

Single polarized
 π -p Drell-Yan

The results from 2009 beam test

YAMAGATA UNIVERSITY

	Expected	Found
J/ψ	3600±600	3170±70
DY M>4 GeV	110±22	84±10

- 3 days of data taking
- $8 \cdot 10^7 \pi^- / 9.6 \text{ s spill}$
- 2 cells of CH₂ of 40-20-40 cm
- temporary absorber
- simple trigger

Single Polarized Drell-Yan cross section

$$\frac{d\sigma}{d^4q d\Omega} \stackrel{\text{LO}}{=} \frac{\alpha_{em}^2}{F q^2} \hat{\sigma}_U \left\{ \left(1 + D_{[\sin^2 \theta]} A_U^{\cos 2\phi} \cos 2\phi \right) + |S_T| \left[A_T^{\sin \phi_S} \sin \phi_S + D_{[\sin^2 \theta]} \left(A_T^{\sin(2\phi + \phi_S)} \sin(2\phi + \phi_S) + A_T^{\sin(2\phi - \phi_S)} \sin(2\phi - \phi_S) \right) \right] \right\},$$

$$A_T^{\sin \phi_S} \rightarrow (f_1)_\pi \otimes (Sivers)_p$$

Unique to measure TMD in
SIDIS and DY
with the same spectrometer

DY

$$A_U^{\cos 2\phi} \rightarrow (BM)_\pi^{DY} \otimes (BM)^{DY}$$

$$A_T^{\sin(2\phi-\phi_s)} \rightarrow (BM)_\pi^{DY} \otimes (Trans.)_p$$

$$A_T^{\sin \phi_s} \rightarrow (f_1)_\pi \otimes (Sivers)_p^{DY}$$

$$(Sivers)^{DIS} = - (Sivers)^{DY}$$

$$(BM)^{DIS} = - (BM)^{DY} \quad ?$$

2012 Promakoff (18 weeks), **GPD** (6 weeks)

2013 SPS shutdown

2014 Drell-Yan

2015 GPD

2016 GPD

201? GPD with Pol. target...

- COMPASS has studied the proton spin structure
 - with long. and trans. polarized nucleon target
 - $\Delta\Sigma\sim 0.3$, small ΔG
 - Sivers & Collins asymmetries agree with HERMES
- COMPASS II: 2012 - 2015
 - GPD to reveal the 3D structure with DVCS, HEMP
 - SIDIS measurements will be done at the same time
 - the hadron multiplicity, Boer-Mulders
 - Pion induced polarized Drell-Yan
 - TMD: Boer-Mulders, Sivers, Pretzel., and Transversity without Fragmentation process
 - Test of the TMD universality
 - Phase 2: Pol. target and RPD: access to GPD E
